

Plantweb Insight™ Valve Health Application

The Plantweb Insight Valve Health application is an on-site application that generates health indicators by verifying if a plant's valves are in a medium or high repair urgency status. This is calculated using a health index score and a status algorithm that considers the same factors experienced Emerson experts would, such as application knowledge and device historical data.

With this application, you can view trends of past valve health, valve problem explanations, recommended actions, time frames to take action, and financial impact estimates. You are able to monitor valves in near real time and track the impact set against key performance objectives.

The application accesses data from sources such as the Emerson THUM™ Adapter, Emerson 1410/1420 Wireless Gateway, and AMS to continuously determine valve status. This includes, in addition to identifying the urgency levels, a detailed description of the issues or alerts received by the valves individually.

Features

- **Reduce Costs**— The Valve Health application allows new time-based analytics to identify valve health issues. This helps create proactive maintenance planning and the reduction of expediting repair costs due to unexpected valve failure.
- **Prevent Unplanned Downtime**— The Valve Health application sends predictive alerts on critical valves and repair urgency. This allows you to intelligently manage and schedule needed maintenance.
- **Improve Efficiency**— Establish a fleet-wide view of connected valves to prioritize repairs. Receive maintenance action recommendations/timing and valve reports summarizing needed repairs.

Plantweb Insight Valve Health Application

- **Suite of Plantweb Insight Applications**— The Valve Health application joins a suite of established and growing subscription applications available from Emerson's Plantweb Insight solutions suite. Subscription availability minimizes investment costs and ensures availability to new application enhancements
- **Easy to Use**— The Valve Health application offers an intuitive interface with actionable alerts and recommendations. A dashboard view highlights valves needing further investigation and a health index monitors overall valve health trends.

Dashboard

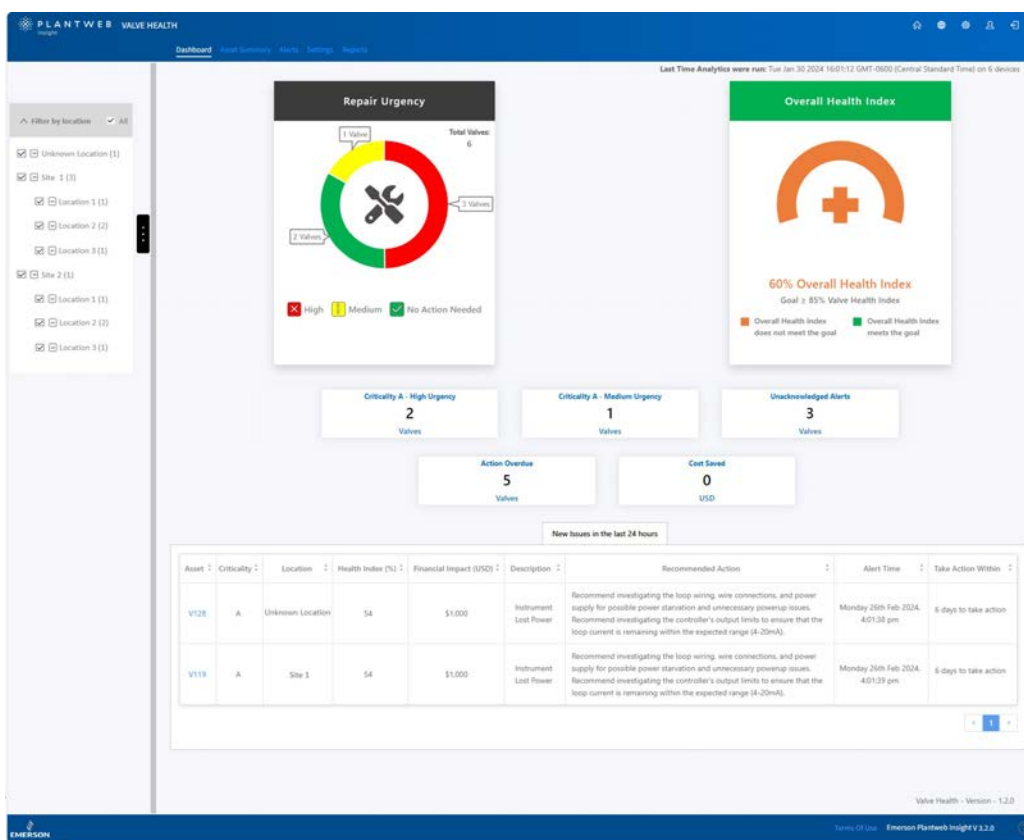

The dashboard provides a consolidated view of the status of all valves connected to the system, which helps users to quickly identify the health status of each valve based on its urgency level for repair. This allows users to prioritize valves that require attention and make informed decisions based on the actionable information presented.

In addition, the dashboard also provides users with the Overall Health Index of the entire fleet of valves, providing an easy way to evaluate the overall status of the valve fleet and understand its level of degradation based on the score obtained. The dashboard also

allows users to quickly identify the level of deterioration of the most critical valves, providing complementary information about the valve fleet, such as the number of valves outside the time frame to take action, and unrecognized alerts.

After identifying problems and taking action, the dashboard can display an estimate of how much money users have saved over time. The dashboard displays a list of the latest alerts received in the last 24, 48, and 72 hours, which helps users take proactive measures to address issues quickly and detect problems that can have a significant impact on plant productivity.

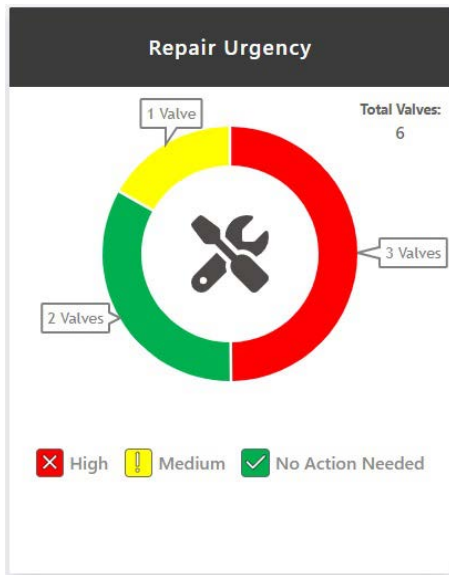

Figure 1. Dashboard Overview

Repair Urgency

- Quick identification of the health status of all valves
- Urgency levels associated with each color: red, yellow, and green
- Address with one click to see where the issue is

Figure 2. Urgency Display

Overall Health Index

- Visualization of the health index of the entire fleet of valves
- Valve fleet health trend over time

Figure 3. Overall Health Index

Tiles

- Relevant information that could influence the plant process summarized in five tiles
- 5 tiles: Criticality A High Urgency; Criticality A Medium Urgency; Action Overdue; Unacknowledged Alerts; and Cost Saved
- Address with one click to see the content

Figure 4. Tile List Breakdown

Criticality A - High Urgency

The most important valves that require a higher level of repair urgency. The criticality level is defined by the user.

Criticality A - Medium Urgency

The most important valves that are in a medium level of repair urgency. The criticality level is defined by the user.

Action Overdue

Valves the user has not fixed within the recommended time to take action.

Unacknowledged Alerts

Valves that have at least one unacknowledged alert.

Cost Saved

This functionality allows the user to observe the savings projected after repairing one or more valves. The application will capture an estimated savings from the moment the valve goes from a High or Medium Repair Urgency to No Action Needed.

New Issues Table

- This section shows a sortable table with new alerts that have become active in the last 24, 48, and 72 hours

Figure 5. New Issues Table

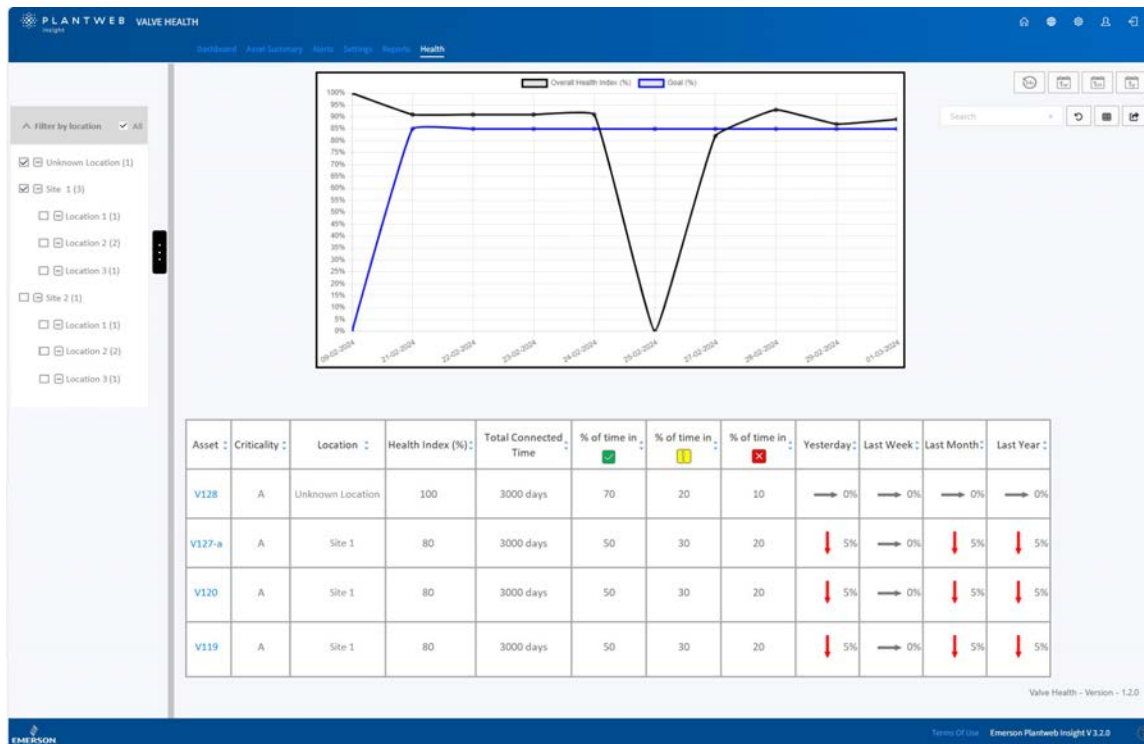

New Issues in the last 24 hours								
Asset	Criticality	Location	Health Index (%)	Financial Impact (USD)	Description	Recommended Action	Alert Time	Take Action Within
V128	A	Unknown Location	54	\$1,000	Instrument Lost Power	Recommend investigating the loop wiring, wire connections, and power supply for possible power starvation and unnecessary powerup issues. Recommend investigating the controller's output limits to ensure that the loop current is remaining within the expected range (4-20mA).	Monday 26th Feb 2024, 4:01:38 pm	6 days to take action
V119	A	Site 1	54	\$1,000	Instrument Lost Power	Recommend investigating the loop wiring, wire connections, and power supply for possible power starvation and unnecessary powerup issues. Recommend investigating the controller's output limits to ensure that the loop current is remaining within the expected range (4-20mA).	Monday 26th Feb 2024, 4:01:39 pm	6 days to take action

Health

This screen allows the user to visualize the performance of the valve fleet by comparing it with

the goal, the cumulative repair urgency status, connection hours, and percentage variations of the fleet compared to the previous day, the previous week, the last month, and the last year.

Figure 6. Health Screen View

Asset Summary

The asset summary page is a tabular view of all assets being monitored. These details include asset, location, critically, and user-defined financial impact for each individual asset.

Also displayed are calculated insights such as repair urgency status, health index, and status duration.

This page is fully sortable, searchable, and filterable for quick prioritization and identification. The asset summary page can also be exported via CSV or Excel for reporting.

Figure 7. Asset Summary View

The screenshot displays the 'Asset Summary' view in the Plantweb Valve Health application. The interface includes a navigation menu on the left with filters for location, a main table of assets, and a top navigation bar. The table contains the following data:

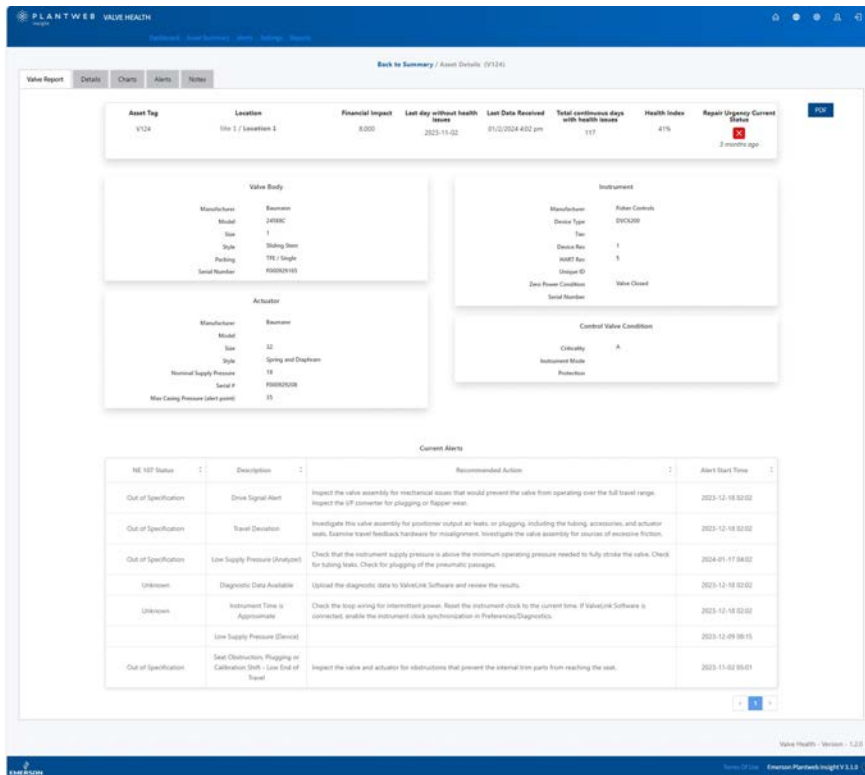

Select All	Asset	Criticality	Location	Financial Impact (USD)	Repair Urgency	Health Index (%)	Status Duration
<input type="checkbox"/>	V128	A	Unknown Location	1000	⚠️	68	4 days

- Alert end time

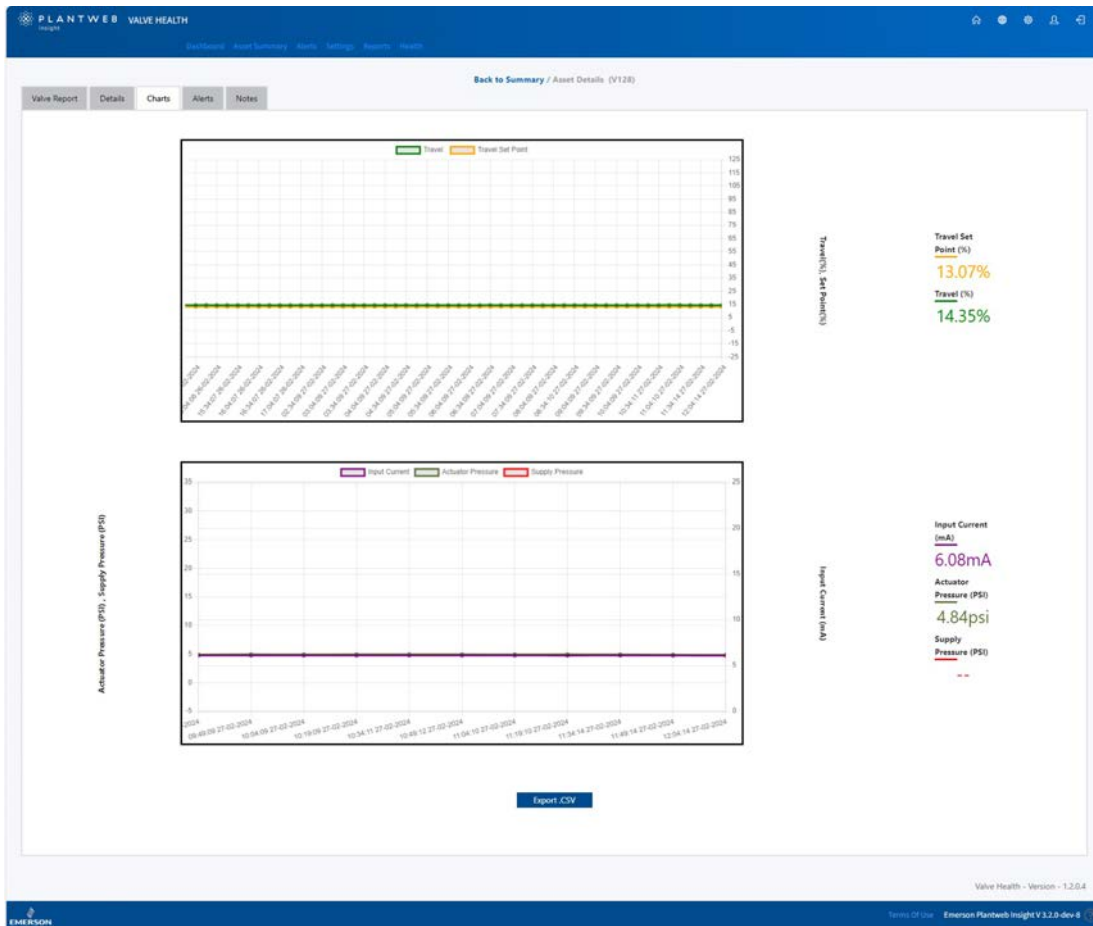

Figure 9. Asset Details Alerts

NE 107 Status	Description	Recommended Action	Alert Time	Take Action Within	Acknowledged
Out of Specification	Drive Signal Alert	Inspect the valve assembly for mechanical issues that would prevent the valve from operating over the full travel range. Inspect the I/P converter for plugging or flapper wear.	Monday 18th Dec 2023, 2:02:17 pm	Immediate 64 days out of range	<input checked="" type="checkbox"/>
Out of Specification	Travel Deviation	Investigate this valve assembly for positioner output air leaks, or plugging, including the tubing, accessories, and actuator seals. Examine travel feedback hardware for misalignment. Investigate the valve assembly for sources of excessive friction.	Monday 18th Dec 2023, 2:02:17 pm	Immediate 41 days out of range	<input checked="" type="checkbox"/>
Out of Specification	Low Supply Pressure (Analyzer)	Check that the instrument supply pressure is above the minimum operating pressure needed to fully stroke the valve. Check for tubing leaks. Check for plugging of the pneumatic passages.	Wednesday 17th Jan 2024, 4:02:42 pm	Immediate 40 days out of range	<input checked="" type="checkbox"/>
Unknown	Diagnostic Data Available	Upload the diagnostic data to ValveLink Software and review the results.	Monday 18th Dec 2023, 2:02:17 pm	Immediate 64 days out of range	<input type="checkbox"/>
Unknown	Instrument Time is Approximate	Check the loop wiring for intermittent power. Reset the instrument clock to the current time. If ValveLink Software is connected, enable the instrument clock synchronization in Preferences/Diagnostics.	Monday 18th Dec 2023, 2:02:17 pm	Immediate 41 days out of range	<input type="checkbox"/>
Out of Specification	Seat Obstruction, Plugging or Calibration Shift - Low End of Travel	Inspect the valve and actuator for obstructions that prevent the internal trim parts from reaching the seat.	Thursday 2nd Nov 2023, 5:01:28 pm	Immediate 87 days out of range	<input type="checkbox"/>

Reports

Several kinds of reports can be generated by the Valve Health application for different audiences. A summary report gives a higher level view of the overall fleet and

is available in shorter or longer versions. A maintenance report shows more details available in the application that are more of interest to Maintenance.

Figure 17. Reports

Ordering Information

Ordering and Installation Process

1. Ensure prerequisites are in place (see Specifications, table 1).
2. Place a Valve Health application order through your [Emerson sales office](#).
3. Download the Plantweb Insight Framework and Valve Health application from MyEmerson.
4. Install the applications.
5. Launch the application and request the Valve Health application software activation license (requires order information and computer fingerprint code).
6. Install the license key and proceed with the application setup.

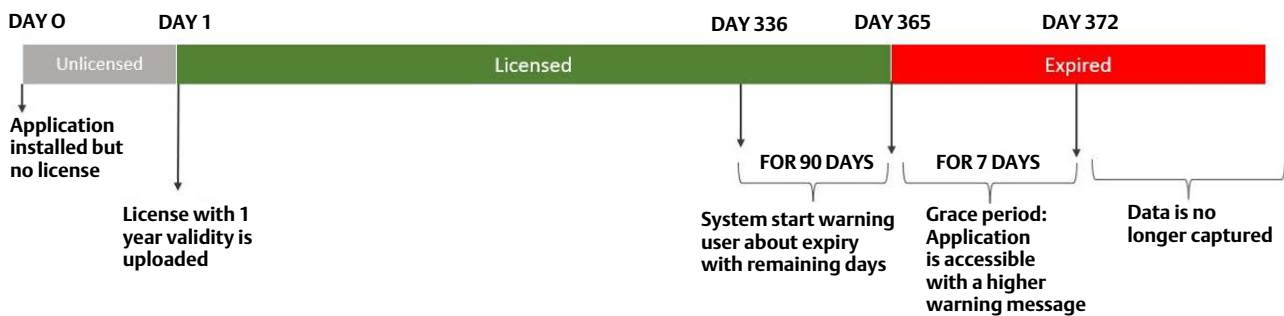

License Key

The Plantweb Insight applications require a valid license key to be used. License keys are delivered upon placing an order for a subscription order code and submitting a locking ID from the software. Plantweb Insight license keys are provided as a file.

Table 3. Subscription Duration and Assets

Description
90-Day trial for up to 25 assets
1-Year subscription for up to 25 assets
1-Year subscription for up to 50 assets
1-Year subscription for up to 75 assets
1-Year subscription for up to 100 assets
2-Year subscription for up to 25 assets
2-Year subscription for up to 50 assets
2-Year subscription for up to 75 assets
2-Year subscription for up to 100 assets
3-Year subscription for up to 25 assets
3-Year subscription for up to 50 assets
3-Year subscription for up to 75 assets
3-Year subscription for up to 100 assets
Subscription for >100 assets also available

Note

The Repair Urgency statuses, Overall Health Index, and recommendations presented in the Valve Health application consider only what is known to Emerson relative to a limited collection of risk factors with no consideration of the processes under control, the application/configuration of the system in which a valve operates, or the actual actions taken locally to mitigate the identified risks. Valve health can be influenced by a variety of factors, and no product or software can guarantee full and continuous operability or performance. The Valve Health application is expected to assist users in monitoring and maintaining the health and performance of its valves. However, it is only a portion of an overall strategy for monitoring and maintaining the health and performance of your valves, and Emerson does not warrant that the Valve Health application or its use of will protect your valves from experiencing health or performance degradation.

Neither Emerson, nor any of their affiliated entities assumes responsibility for the selection, use or maintenance of any product. Responsibility for proper selection, use, and maintenance of any product remains solely with the purchaser and end user.
