

EZR Series Pressure Reducing Regulator

W7399

TYPE EZR REGULATOR

Introduction

The Type EZR pilot-operated, pressure reducing regulator is designed for natural gas transmission/distribution systems and industrial/commercial applications. The Type EZR provides smooth, quiet operation, tight shutoff and long life, even in dirty service. Its internally actuated metal plug eliminates disadvantages associated with boot-style regulators and the specially engineered flow path deflects debris, protecting the seat from damage and erosion. The Type EZR is used in conjunction with a 161EB or 161AY Series pilot and Type 112 restrictor or with a PRX Series pilot (with integral restrictor). The Type EZR pressure reducing regulator can be converted to a high pressure relief valve or backpressure regulator by simply changing to a relief piloting system (refer to Bulletin 71.4:EZR).

W8136

TYPE EZROX WITH INTEGRAL
SLAM-SHUT DEVICE

Figure 1. EZR Series Pressure Reducing Regulator

An optional inlet strainer prevents large particles from entering the main valve, limiting damage to internal parts. A Type 252 pilot supply filter (optional) can be added to keep pipeline debris from entering the pilot. For underpressure and/or overpressure protection, the Type EZR is available with an integral slam-shut device.

EZR Series

Figure 2. EZR Series Features and Benefits

Features and Benefits

- 1 **Tight Shutoff**—The EZR Series uses a diaphragm and metal plug, eliminating the disadvantages of boot-style regulators. When open, the metal plug deflects particles and debris away from the diaphragm. The result is enhanced resistance to particle erosion, which provides excellent shutoff over an extended life. When closed, loading pressure and the main spring push the diaphragm onto the tapered-edged seat on the cage.
- 2 **Debris Protection**—The specially engineered flow path, along with the metal plug, allows flow through the regulator without seat impingement. The addition of an optional inlet strainer prevents large particles from entering the regulator, eliminating damage to internal parts.
- 3 **Quiet Operation**—The specially engineered flow path allows flow through the center of the cage and down through the cage slots—reduces operational noise, making the EZR Series an exceptionally quiet regulator.
- 4 **High Accuracy**—Multiple outlet pressure ranges and narrow proportional bands offered by the 161EB Series, 161AY Series and Type PRX/120 pilots provide the EZR Series with tight, accurate control. For applications requiring tighter control, using a Type 161AYM, 161EBM, 161EBHM or PRX/120 pilot will increase the accuracy of the regulator.

- 5 **Long Life**—The robust design of the EZR Series with its metal plug and specially engineered flow path allows flow through the regulator without seat impingement. The diaphragm design eliminates the possibility of taking a “set”, a common problem with boot-style regulators. To prevent damage, the diaphragm is fully supported in both the open and closed positions. These features enable the EZR Series components to work longer with less wear and tear.
- 6 **Full Usable Capacity**—Fisher™ branded regulators are laboratory tested. 100 percent of the published flow capacity can be used with confidence.
- 7 **Thorough Laboratory Testing**—Emerson Process Management Regulator Technologies, Inc. state-of-the-art flow laboratory allows thorough testing of all new designs. Tests are conducted on Fisher branded regulators for performance features such as flow, strength, shutoff, material compatibility and noise.
- 8 **Easy In-Line Maintenance**—Top-entry design reduces maintenance time. Trim parts can be inspected, cleaned and replaced without removing the body from the pipeline. No special alignment is required when replacing the diaphragm. The EZR Series incorporates E-body construction, making it easy to change existing E-body regulators and control valves with an EZR Series trim kit.
- 9 **O-ring Design**—The EZR Series uses elastomer O-rings instead of gaskets, reducing maintenance and assembly time.
- 10 **In-Service Travel Indicator**—The optional travel indicator responds to the precise movement of the diaphragm and plug assembly and shows the actual valve position. The travel indicator makes in-service inspection and troubleshooting easy.
- 11 **Versatility**—The EZR Series uses the E-body, making available the standard construction materials and end connections (ASME and EN) used by other E-body regulators and control valves. The 161AY Series pilots can handle inlet pressures up to 150 psig / 10.3 bar and outlet pressure from 6 in. w.c. to 7 psig / 15 mbar to 0.48 bar. The 161EB Series pilots can handle inlet pressures up to 1500 psig / 103 bar and outlet pressures from 5 to 700 psig / 0.35 to 48.3 bar. The Type PRX pilots can handle inlet pressures up to 1480 psig / 102 bar and outlet pressures up to 1000 psig / 69.0 bar.

By changing to a relief piloting system (6358 Series pilots), a Type EZR pressure reducing regulator easily becomes a very effective high volume relief valve or backpressure regulator (refer to Bulletin 71.4:EZR).

Figure 2. EZR Series Features and Benefits (continued)

- 12 **Easily Maintained Pilots**—The pilots are designed to allow quick and simple in-line trim inspection and parts replacement.
- 13 **Powder Paint Coating**—Fisher regulators are powder paint coated providing superior impact, abrasion and corrosion resistance.

EZR Series

14 Slam-shut device— Type EZROX with slam-shut device provides either overpressure (OPSO), overpressure and underpressure (OPSO/UPSO) or dual overpressure (OPSO/OPSO) protection by completely shutting off the flow at the downstream system.

15 Hydrogen Ready—Products have been evaluated for material compatibility, potential leakage and permeation and susceptibility to embrittlement for Hydrogen applications. Based on an extensive evaluation and testing program, EZR Series configurations are available for use in Hydrogen applications.

Pilot Type Descriptions

Type 161AY—Low-pressure pilot with an outlet pressure range from 6 in. w.c. to 7 psig / 15 mbar to 0.48 bar. Pilot bleeds (exhausts) downstream through the sense (control) line.

Type 161AYM—The monitor version of the Type 161AY pilot. The pilot bleed (exhaust) is isolated from the sense (control) line. This pilot is used in monitoring systems requiring an isolated pilot bleed (exhaust).

Type 161EB—High accuracy pilot with an outlet pressure range from 5 to 350 psig / 0.34 to 24.1 bar. Pilot bleeds (exhausts) downstream through the sense (control) line.

Type 161EBM—The monitor version of the Type 161EB pilot. The pilot bleed (exhaust) is isolated from the sense (control) line. This pilot is used in monitoring systems requiring an isolated pilot bleed (exhaust).

Type 161EBH—The high pressure version of the Type 161EB pilot with an outlet pressure range from 250 to 700 psig / 17.2 to 48.3 bar.

Type 161EBHM—The high pressure version of the Type 161EBM pilot with an outlet pressure range from 250 to 700 psig / 17.2 to 48.3 bar.

Type PRX/120—Outlet pressure range of 14.5 to 435 psig / 1 to 30.0 bar. The Type PRX/120 can be used as the pilot on single stage pressure reducing regulators, as the monitor pilot or as the working pilot in wide-open monitor systems or as the working pilot for monitoring and working regulators in the working monitoring systems. The Type PRX has a double diaphragm which provides increased accuracy and sensitivity, an integral restrictor adjustment to allow adjustable opening and closing speeds and a damper adjustment to allow adjustments to make for inlet pressure variability and loading pressure oscillations.

Type PRX/120-AP—Outlet pressure range of 435 to 1000 psig / 30.0 to 69.0 bar. The Type PRX/120-AP can be used as the pilot on single stage pressure reducing regulators, as the monitor pilot or as the working pilot in wide-open monitor systems or as the working pilot for monitoring and working regulators in the working monitoring systems.

Type PRX/125 (Monitor Pilot Only)—Identical to the Type PRX/120 except the restriction screw is removed. The Type PRX/125 can only be used as the monitor override pilot on working monitor applications. Always order with Type PRX-120 in working monitor applications.

Type PRX/125-AP (Monitor Pilot Only)—Identical to the Type PRX/120-AP except the restriction screw is removed. The Type PRX/125-AP can only be used as the monitor override pilot on working monitor applications. Always order with Type PRX/120-AP in working monitor applications.

Low Flow Application Considerations

When selecting pilots to use with the EZR Series:

Use the 161 Series pilots for applications where normal flow is typically 5% and greater of maximum rated flow. The accuracy and control of the 161 Series pilots can be increased using the series' monitor pilots (M).

When the potential for low flow (< 5% of maximum rated flow) for extended periods exists due to the regulator being oversized or operational constraints the Type PRX pilot is recommended.

Installation of an oversized regulator may make low flow operation difficult. The smallest Type EZR that meets the flow requirements should be selected. Reduced capacity trim reduces relief valve requirements by decreasing the maximum possible flow through the regulator but does not improve low flow performance. Additional details on how to set up the pilots for various flow rates is provided in the Type EZR Instruction Manual. If you have questions on which pilot to use for your application, contact your local Sales Office.

Optional Pilot Supply Filter

The Type 252 pilot supply filter prevents pipeline debris from entering the pilot, a primary cause of pilot clogging. The aluminum body is rated for 2150 psig / 148 bar and the stainless steel body for 2750 psig / 190 bar. Both are available in standard or extended length with a pipe plug or a drain valve. When the upstream system is free of debris, the EZR Series may be installed without a filter.

Specifications

This section lists the specifications for the EZR Series pressure reducing regulator. The set pressure range for a pilot as it comes from the factory appears on the spring case. Other information for an individual main valve appears on the nameplate.

Available Configurations

Type EZR: Pilot-operated pressure reducing regulator for low to high outlet pressure

Type EZROX: Type EZR with a Type OS2 slam-shut device for overpressure (OPSO), overpressure and underpressure (OPSO/UPSO) or dual overpressure (OPSO/OPSO) protection

Options

- Pre-piped Pilot Supply and Pilot Bleed
- Travel Indicator
- Inlet Strainer
- Type 252 Pilot Supply Filter
- Trim Package
- Relief Size-Reduction Trim
- Pilot Diaphragm for Pressure Loading

Construction Materials

EZR Series Main Valve

Body: Cast iron, WCC steel or LCC steel

Bonnet: Steel

Bonnet Bushing: Stainless steel

Cage: Stainless steel

Spring: Zinc-plated steel or Stainless steel

Top Plug: Stainless steel

Bottom Plug: Stainless steel

Inlet Strainer: Stainless steel

Strainer Replacement Shim: Stainless steel

Diaphragm: Nitrile (NBR) or Fluorocarbon (FKM)

O-rings: Nitrile (NBR) or Fluorocarbon (FKM)

Flanged Locknut: Zinc-plated steel

Backup Rings: Polytetrafluoroethylene (PTFE)

Upper Spring Seat: Stainless steel

Indicator Protector and Cover: Plastic

Indicator Stem: Stainless steel

Indicator Fitting: Stainless steel

Travel Indicator Plug: Stainless steel

Restricted Trim

E-Ring: Carbon steel

Restrictor Plate: Stainless steel

161EB Series Pilots

Body: Stainless steel

Spring Case: Stainless steel

Body Plug: Stainless steel

Control Spring: Zinc-plated steel

Valve Plug: Nitrile (NBR) or Fluorocarbon (FKM)

Adjusting Screw: Zinc-plated steel

Diaphragm: Nitrile (NBR) or Fluorocarbon (FKM)

Diaphragm Limiter: Stainless steel

O-rings: Nitrile (NBR)

161AY Series Pilots

Body: Cast iron

Spring Case and Lower Casing: Ductile iron

Stem Guide: Stainless steel

Control Spring: Zinc-plated steel

1. The pressure/temperature limits in this Bulletin and any applicable standard or code limitation should not be exceeded.

2. Ratings and end connections other than ASME standards can usually be provided; contact your local Sales Office.

1. Proportional band and Accuracy Class include outlet pressure drop plus hysteresis (friction), but do not include lockup.
2. Proportional band was determined with a pressure drop ranging from 50 to 150 psig / 3.5 to 10.3 bar. Approximately double the proportional band if the pressure drop is less than 50 psig / 3.5 bar.
3. With Type 112 restrictor set on 2. With Type PRX restrictor turn the restrictor screw one turn counterclockwise from fully seated.
4. Should only be used as the intermediate reduction pilot on the Type EZR worker/monitor systems.
5. Proportional band was determined with a pressure drop ranging from 100 to 300 psig / 6.9 to 20.7 bar. Approximately double the proportional band if the pressure drop is less than 100 psi / 6.9 bar.

1. See Table 1 for structural design ratings, Table 3 for pilot ratings and Table 7 for maximum pressure ratings.
 2. The yellow spring is only recommended for inlet pressures under 100 psig / 6.9 bar.
 3. The red, black, purple, red stripe and black with white stripe springs are only recommended for applications where the maximum inlet pressure can exceed 500 psig / 35 bar.

Figure 3. Type EZR Operational Schematic (continued)

Principle of Operation

As long as the outlet (control) pressure is above the outlet pressure setting, the pilot valve plug or disk remains closed (Figure 3). Force from the main spring, in addition to inlet pressure bleeding through the restrictor (integral in the PRX Series pilots), provide downward loading pressure to keep the main valve diaphragm and plug assembly tightly shutoff.

When the outlet pressure decreases below the pilot outlet pressure setting, the pilot plug or disk assembly opens. Loading pressure bleeds downstream through the pilot faster than it can be replaced through the supply line. This reduces loading pressure on top of the main valve diaphragm and plug assembly and lets the unbalanced force between inlet and loading pressure overcome the main spring force to open the Type EZR diaphragm and plug assembly.

As the outlet pressure rises toward the outlet pressure setting, it compresses the pilot diaphragm against the pilot control spring and lets the pilot valve plug or

disk close. Loading pressure begins building on the Type EZR diaphragm and plug assembly. The loading pressure, along with force from the main spring, pushes the diaphragm and plug assembly onto the tapered-edge seat, producing tight shutoff.

Installation (Figure 8)

The robust design of the Type EZR regulator allows it to be installed indoors or outdoors. When installed outdoors, the Type EZR does not require a protective housing. It is designed to withstand the elements and the powder paint coating protects it against impacts, abrasions and corrosion.

When installed indoors, no remote venting is required except on the pilot spring case. This regulator can also be installed in a pit that is subject to flooding by venting the pilot spring case above the maximum possible flood level so the pilot setting can be referenced at atmospheric pressure.

EZR Series

Figure 4. Diaphragm Markings

Monitoring Systems

Monitoring regulation is overpressure protection by containment, therefore, there is no relief valve to vent to the atmosphere. When the working regulator fails to control the pressure, a monitor regulator installed in series, which has been sensing the downstream and control pressure, goes into operation to maintain the downstream pressure at a slightly higher than normal pressure. During an overpressure situation, monitoring keeps the customer on line. Also, testing is relatively easy and safe. To perform a periodic test on a monitoring regulator, increase the outlet set pressure of the working regulator and watch the outlet pressure to determine if the monitoring regulator takes over at the appropriate outlet pressure.

Wide-Open Monitoring Systems (Figure 5)

There are two types of wide-open monitoring systems: upstream and downstream. The difference between upstream and downstream monitoring is that the functions of the regulators are reversed. Systems can be changed from upstream to downstream monitoring and vice-versa, by simply reversing the setpoints of the two regulators. The decision to use either an upstream or downstream monitoring system is largely a matter of personal preference or company policy.

Table 5. Diaphragm Imprint Codes

THICKNESS		MATERIAL		DIAPHRAGM MATERIAL
Imprint	Ink Code	Imprint	Ink Code	
2	130	2	17E68	17E68 - Nitrile (NBR) (low temperature)
		4	17E88	17E88 - Fluorocarbon (FKM) (high aromatic hydrocarbon content resistance)
		5	17E97	17E97 - Nitrile (NBR) (high-pressure and/or erosion resistance)

In normal operation of a wide-open configuration, the working regulator controls the system's outlet pressure. With a higher outlet pressure setting, the monitor regulator senses a pressure lower than its setpoint and tries to increase outlet pressure by going wide-open. If the working regulator fails, the monitoring regulator assumes control and holds the outlet pressure at its outlet pressure setting.

In a wide-open Type EZR monitoring system, system lockup will equal the lockup of the worker regulator on both an upstream monitor when the upstream pilot exhaust is piped to the intermediate pressure and a downstream monitor with upstream pilot exhaust piped to either intermediate pressure or outlet pressure. With these configurations, the diaphragm of the monitor regulator will change position with every load change. On an upstream monitor with the upstream pilot exhaust piped to downstream, lockup will occur at the monitor's setpoint and the diaphragm of the monitor regulator will be fully open.

Working Monitoring Regulators (Figure 6)

In a working monitoring system, the upstream regulator requires two pilots and it is always the monitoring regulator. The additional pilot permits the monitoring regulator to act as a series regulator to control an intermediate pressure during normal operation. In this way, both units are always operating and can be easily checked for proper operation. In a working monitor system, system lockup will equal the lockup of the downstream regulator.

In normal operation, the working regulator controls the outlet pressure of the system. The monitoring regulator's working pilot controls the intermediate pressure and the monitoring pilot senses the system's outlet pressure. If the working regulator fails, the monitoring pilot will sense the increase in outlet pressure and take control.

Figure 6. Type EZR-PRX-PRX Working Monitor Schematic

For PRX Series pilots (Figure 6), the working pilot is Type PRX-120 or PRX-120AP; the monitor pilot is Type PRX-125 or PRX-125AP.

Note

The downstream regulator must be rated for the maximum allowable operating pressure of the system because this will be its inlet pressure if the monitoring regulator fails. Also, the outlet pressure rating of the monitoring pilot and any other components that are exposed to the intermediate pressure must be rated for full inlet pressure.

Working monitor installations require a Type EZR main valve with a 161AY Series, 161EB Series, Type PRX/120 or PRX/120-AP working pilot and a Type 161AYM, 161EBM, PRX/125 or PRX/125-AP monitoring pilot for the upstream regulator and a Type EZR with the appropriate 161AY Series, 161EB Series, Type PRX/120 or PRX/120-AP pilot for the downstream regulator.

Overpressure Protection

Overpressuring any portion of a regulator or associated equipment may cause personal injury, leakage or property damage due to bursting of pressure-containing parts or explosion of accumulated gas. Provide appropriate pressure relieving or pressure limiting devices to ensure that the limits in the Specifications section are not exceeded. Regulator operation within ratings does not prevent the possibility of damage from external sources or from debris in the pipeline. Common methods of external overpressure protection include relief valves, monitoring regulators and shutoff devices.

Type EZROX regulator relies on the integrated slam-shut device for overpressure (OPSO), overpressure and underpressure (OPSO/UPS) or dual overpressure (OPSO/OPSO) protection. In the event that outlet pressure rises above or falls below the pressure setting, slam shut will completely shutoff the flow of gas to the downstream system.

Table 6. Diaphragm Temperature Capabilities, Erosion Resistance and Chemical Compatibility

	17E68 NITRILE (NBR)	17E97 ⁽¹⁾ NITRILE (NBR)	17E88 FLUOROCARBON (FKM)
Gas Temperature (for lower temperatures contact your local Sales Office)	-20 to 150°F / -29 to 66°C	0 to 150°F / -18 to 66°C	0 to 260°F / -18 to 127°C ⁽²⁾
General Applications	Best for cold temperatures.	Best for high pressure conditions, i.e. transmission service or high pressure industrial service. It is also the best for abrasive or erosive service applications.	Best for natural gas having aromatic hydrocarbons. It is also the best for high temperature applications.
Heavy Particle Erosion	Fair	Excellent	Good
Natural Gas With:			
Up to 3% aromatic hydrocarbon content ⁽³⁾	Good	Excellent	Excellent
3 to 15% aromatic hydrocarbon content ⁽³⁾	Poor	Good	Excellent
15 to 50% aromatic hydrocarbon content ⁽³⁾	Not recommended	Poor	Excellent
Up to 3% H ₂ S (hydrogen sulfide or sour gas)	Good	Good	Good
Up to 3% ketone	Fair	Fair	Fair
Up to 10% alcohol	Good	Good	Fair
Up to 3% synthetic lube	Fair	Fair	Good

1. The NPS 6 / DN 150, 17E97 diaphragm will perform in gas temperatures as low as -20°F / -29°C.
 2. For differential pressures above 400 psig / 28 bar diaphragm temperature is limited to 150°F / 66°C.
 3. The aromatic hydrocarbon content is based on percent volume.

Capacity Information

Note

Flow capacities are laboratory verified; therefore, regulators may be sized for 100% flow published capacities. It is not necessary to reduce published capacities.

Tables 13 and 14 show the natural gas regulating capacities of the EZR Series regulator at selected inlet pressures and outlet pressure settings. Flows are in thousands of SCFH at 60°F and 14.7 psia (and in thousands of Nm³/h at 0°C and 1.01325 bar) of 0.6 specific gravity natural gas.

To determine equivalent capacities for air, propane, butane or nitrogen, multiply the capacity by the following appropriate conversion factor: 0.775 for air, 0.628 for propane, 0.548 for butane or 0.789 for nitrogen. For gases of other specific gravities, multiply the given capacity by 0.775 and divide by the square root of the appropriate specific gravity.

To find approximate regulating capacities at pressure settings not given in Tables 13 and 14 or to find wide-open flow capacities for relief sizing at any inlet pressure, perform one of the following procedures. Then, if necessary, convert using the factors provided above.

For critical pressure drops (absolute outlet pressure equal to or less than one-half of absolute inlet pressure), use the following formula:

$$Q = (P_1)(C_g)(1.29)$$

For pressure drops lower than critical (absolute outlet pressure greater than one-half of absolute inlet pressure).

$$Q = \sqrt{\frac{520}{GT}} C_g P_1 \text{SIN} \left(\frac{3417}{C_1 \sqrt{P_1}} \sqrt{\Delta P} \right) \text{DEG}$$

where,

Q = gas flow rate, SCFH

P₁ = absolute inlet pressure, psia (P₁ gauge + 14.7)

C_g = regulating or wide-open gas sizing coefficient from Table 9 or 10

G = gas specific gravity of the gas

T = absolute temperature of gas at inlet, °Rankine

C₁ = flow coefficient

ΔP = pressure drop across the regulator, psi

Then, if capacity is desired in normal cubic meters per hour at 0°C and 1.01325 bar, multiply SCFH by 0.0268.

Figure 7. Type EZROX with Slam-shut Device Operational Schematic

When sizing a working monitor setup, size each regulator separately using either the capacity tables or the equation method. When sizing a wide-open monitor setup, first use the equation method, solving for the pressure drop across the monitor at the maximum flow condition. Next, size the worker using either the capacity tables or equation method while taking into account the monitor's maximum pressure drop.

Slam-Shut Device Principle of Operation

The Type EZROX with slam-shut device can provide either overpressure (OPSO), overpressure and underpressure (OPSO/UPSO) or dual overpressure (OPSO/OPSO) protection

by completely shutting off the flow of gas to the downstream system. The slam shut has a mechanism box and a manometric device. The manometric device is a spring and diaphragm actuator. Its movement activates the detection stage of the mechanism box. The shutoff is a two stage process, the detection stage and the power stage. This separation between detection stage and power stage provides maximum precision, alleviating many false trips caused by environmental vibrations. The slam-shut device includes a bypass valve that will allow pressure to be equalized when resetting the device. Once the slam-shut device has been tripped, it must be manually reset. For more information about the Type EZROX, contact your local Sales Office.

1. For outlet pressures above 435 psig / 30 bar, use Type PRX-AP pilot rather than Type PRX.
 Note: Blank areas indicate where minimum main valve differential pressure is not met.

1. For outlet pressures above 435 psig / 30 bar, use Type PRX-AP pilot rather than Type PRX.
Note: Blank areas indicate where minimum main valve differential pressure is not met.

1. Minimum suggested difference between slam-shut set pressure and normal operating pressure of the system.
2. Maximum difference between overpressure and underpressure when using one manometric device (Type BMS1) with tripping hook. For underpressure and overpressure points greater than this maximum number, use a second manometric device (Type BMS2) for underpressure protection.

Table 16. Applications and Construction Guide (See Figure 9)

APPLICATION	MECHANISM BOX REQUIRED		MANOMETRIC SENSING DEVICE REQUIRED	
	Type BM1	Type BM2	Type BMS1	Type BMS2
Overpressure Shutoff (OPSO)	Yes	No	Yes	No
Underpressure Shutoff (UPSO)			Yes ⁽¹⁾	
Overpressure Shutoff (OPSO) and Underpressure Shutoff (UPSO)			Yes ⁽²⁾	
Overpressure Shutoff (OPSO) and Underpressure Shutoff (UPSO)	No	Yes	Yes ⁽²⁾	Yes ⁽¹⁾
Overpressure Shutoff (OPSO), Overpressure Shutoff and Underpressure Shutoff (OPSO/UPSO) and Dual Overpressure Shutoff (OPSO/OPSO)			Yes ⁽²⁾	Yes ⁽¹⁾

1. When using one manometric sensing device (Type BMS1 or BMS2) for both overpressure and underpressure shutoff, make sure that the difference between set pressures falls within the maximum range shown in Table 15.
2. When using two manometric sensing devices (Type BMS1 and a Type BMS2), the Type BMS1 can only be used for high trip.

MECHANISM BOX (TYPE BM1) WITH
1 MANOMETRIC SENSING DEVICE (TYPE BMS1)

MECHANISM BOX (TYPE BM2) WITH
2 MANOMETRIC SENSING DEVICES (TYPES BMS1 AND BMS2)

TYPE EZROX WITH 161AY SERIES PILOTS AND TYPE 252 FILTER

Figure 12. Typical EZROX Dimensions

Table 19. Typical EZROX Dimensions

BODY SIZE, In. / DN	DIMENSION, In. / mm		
	H	D	Y
1 / 25	9.78 / 248	12.34 / 313	10.33 / 262
2, 2 X 1 / 50, 50 X 25	10.39 / 264	12.95 / 329	10.94 / 278
3 / 80	11.78 / 299	14.34 / 364	12.33 / 313
4 / 100	13.5 / 343	16.06 / 408	14.05 / 357
6 / 150	12.99 / 330	15.55 / 395	13.54 / 344

EZR Series

Ordering Information

The precision slotted cage of the EZR Series regulator offers superior noise attenuation. For a standard installation, as well as to obtain a noise prediction for your installation and service conditions, please complete the specifications worksheet at the bottom of the ordering guide on page 31.

Carefully review each specification, then complete the Ordering Guide on pages 28 to 31. If a pilot setpoint is not requested, the regulator will be factory set at the approximate midrange.

Ordering Guide

Type (Select One)

- EZR
- EZROX (with slam shut)

Body Size (Select)

- NPS 1 / DN 25 (Available in steel only)***
- NPS 1-1/4 x 1 / DN 32 x 25 (Available in NPT steel only)***
- NPS 2 / DN 50***
- NPS 2 x 1 / DN 50 x 25***
- NPS 3 / DN 80***
- NPS 4 / DN 100***
- NPS 6 x 4 / DN 150 x 100***
- NPS 8 x 4 / DN 200 x 100***
- NPS 6 / DN 150***
- NPS 8 x 6 / DN 200 x 150***
- NPS 12 x 6 / DN 300 x 150***
- NPS 8 / DN 200***

Body Material and End Connection Style (Select One)

(NPS 8 / DN 200 size available only in LCC steel CL150, CL300 or CL600 RF)

Cast Iron Body

- NPT (Available in NPS 2 or 2 x 1 / DN 50 or 50 x 25 only)***
- CL125 FF***

WCC or LCC Steel Body

- NPT (Available in NPS 1, 1-1/4 x 1, 2 x 1 or 2 / DN 25, 32 x 25, 50 x 25 or 50 only)***
- CL150 RF***
- CL300 RF***
- CL600 RF***
- SWE (Available in NPS 1, 2 x 1 or 2 / DN 25, 50 x 25 or 50 only)*
- BWE 40**
- PN 16/25/40* _____ specify

Main Valve Diaphragm Material (Select One)

- 17E68 Nitrile (NBR) (low temperature) (Not available on NPS 6 or 8 / DN 150 or 200 size)***
- 17E97 Nitrile (NBR) (high-pressure/erosion resistance)***
- 17E88 Fluorocarbon (FKM) (high aromatic hydrocarbons) (Not available on NPS 8 / DN 200 size)**

Cage, Percent of Full Capacity (Select One)

- 100 percent (**standard**)***
- 60 percent (Not available on 8 / DN 200 size)***
- 30 percent (Not available on 8 / DN 200 size)***

Main Valve O-ring Material (Select One)

- Nitrile (NBR) (**standard**)***
- Fluorocarbon (FKM)**

- continued -

Ordering Guide (continued)

Main Valve Main Spring (See Table 7 for Maximum Inlet Rating) (Select One)

NPS 1, 1-1/4 or 2 x 1 / DN 25 or 50 x 25 Main Valve

- Light Blue***
- Black***
- Black with white stripe***
- Red Stripe***

NPS 2 / DN 50 Main Valve

- Yellow***
- Green***
- Red***
- Purple

NPS 3 / DN 80 Main Valve

- Yellow***
- Light Blue***
- Black***

NPS 4, 6 x 4 or 8 x 4 / DN 100, 200 x 150 or 300 x 150 Main Valve

- Yellow***
- Green***
- Red***

NPS 6, 8 x 6 or 12 x 6 / DN 150, 200 x 150 or 300 x 150 Main Valve

- Yellow***
- Green***
- Red***

NPS 8 / DN 200 Main Valve

- Yellow***
- Green***
- Red***

Travel Indicator (Select One)

- No **(standard)*****
- Yes***

Inlet Strainer (Select One)

- No **(standard)*****
- Yes***

Inlet Body Tap (Select One)

- Inlet body tap only **(standard)*****
- Inlet body tap with pre-piped pilot supply***
- Inlet/outlet body taps only***
- Inlet/outlet body taps with pre-piped pilot supply and pilot bleed***

Pilot Diaphragm Material (Select One)

- Nitrile (NBR) **(standard)*****
- Fluorocarbon (FKM)**

Pilot O-ring Material (Select One)

- Nitrile (NBR) **(standard)*****
- Fluorocarbon (FKM)***

Pilot Valve Plug Material (Select One)

- Nitrile (NBR) **(standard)*****
- Fluorocarbon (FKM)***

- continued -

EZR Series

Ordering Guide (continued)

Pilot Type and Outlet Pressure Range (Select One)

Type 161AY

- 6 to 15 in. w.c. / 15 to 37 mbar, Olive Drab***
- 0.5 to 1.2 psig / 0.03 to 0.08 bar, Yellow***
- 1.2 to 2.5 psig / 0.08 to 0.17 bar, Light Green***
- 2.5 to 4.5 psig / 0.17 to 0.31 bar, Light Blue***
- 4.5 to 7 psig / 0.31 to 0.48 bar, Black***

Type 161AYM

- 6 to 15 in. w.c. / 15 to 37 mbar, Olive Drab***
- 0.5 to 1.2 psig / 0.03 to 0.08 bar, Yellow***
- 1.2 to 2.5 psig / 0.08 to 0.17 bar, Light Green***
- 2.5 to 4.5 psig / 0.17 to 0.31 bar, Light Blue***
- 4.5 to 7 psig / 0.31 to 0.48 bar, Black***

Type 161EB

- 5 to 15 psig / 0.34 to 1.0 bar, White***
- 10 to 40 psig / 0.69 to 2.8 bar, Yellow***
- 30 to 75 psig / 2.1 to 5.2 bar, Black***
- 70 to 140 psig / 4.8 to 9.7 bar, Green***
- 130 to 200 psig / 9.0 to 13.8 bar, Blue***
- 30 to 300 psig / 2.1 to 20.7 bar, Green***
(intermediate reduction pilot on the Type EZR worker/monitor systems)
- 200 to 350 psig / 13.8 to 24.1 bar, Red***

Type 161EBM

- 5 to 15 psig / 0.34 to 1.0 bar, White***
- 10 to 40 psig / 0.69 to 2.8 bar, Yellow***
- 30 to 75 psig / 2.1 to 5.2 bar, Black***
- 70 to 140 psig / 4.8 to 9.7 bar, Green***
- 130 to 200 psig / 9.0 to 13.8 bar, Blue ***
- 200 to 350 psig / 13.8 to 24.1 bar, Red***

Type 161EBH

- 250 to 450 psig / 17.2 to 31.0 bar, Blue***
- 400 to 700 psig / 27.6 to 48.3 bar, Red***

Type 161EBHM

- 250 to 450 psig / 17.2 to 31.0 bar, Blue***
- 400 to 700 psig / 27.6 to 48.3 bar, Red***

Type PRX120/125

- 14.5 to 26 psig / 1.00 to 1.8 bar, Yellow***
- 23 to 44 psig / 1.6 to 3.0 bar, Green***
- 41 to 80 psig / 2.8 to 5.5 bar, Blue***
- 73 to 123 psig / 5.0 to 8 bar, Black***
- 116 to 210 psig / 8 to 14 bar, Silver***
- 203 to 334 psig / 14 to 23 bar, Gold***
- 319 to 435 psig / 22 to 30 bar, Aluminum***

Type PRX120/125-AP

- 435 to 1000 psig / 30 to 69 bar, Clear***

Type 252 Pilot Supply Filter (Optional)

Material

- Stainless steel***
- Aluminum**

Length

- Standard***
- Extended**

Drain Valve

- Yes***
- No**

- continued -

Ordering Guide (continued)

Conversion Trim Package (Optional, Not available for NPS 8 / DN 200 size)

- Yes, send one conversion trim package. (If ordering replacement trim package for change-out of existing E-body to a Type EZR, be sure to mark selection of the following items on this page: body size, diaphragm material, inlet strainer option and travel indicator option desired.)

Main Valve Replacement Parts Kit (Optional)

- Yes, send one diaphragm cartridge and O-rings kit to match this order.
- Yes, send one diaphragm and O-rings kit to match this order.

Pilot Replacement Parts Kit (Optional)

- Yes, send one replacement kit to match this order.

Regulators Quick Order Guide	
***	Readily Available for Shipment
**	Allow Additional Time for Shipment
*	Special Order, Constructed from Non-Stocked Parts. Consult your local Sales Office for Availability.
Availability of the product being ordered is determined by the component with the longest shipping time for the requested construction.	

Specification Worksheet
<p>Application (Please designate units): Specific Use _____ Line Size _____ Gas Type and Specific Gravity _____ Gas Temperature _____ Does the Application Require Overpressure Protection? <input type="checkbox"/> Yes <input type="checkbox"/> No If yes, which is preferred: <input type="checkbox"/> Relief Valve <input type="checkbox"/> Monitor Regulator <input type="checkbox"/> Shutoff Device Is overpressure protection equipment selection assistance desired? _____</p>
<p>Pressure: Maximum Inlet Pressure (P_{1max}) _____ Minimum Inlet Pressure (P_{1min}) _____ Downstream Pressure Setting(s) (P_2) _____ Maximum Flow (Q_{max}) _____</p>
<p>Performance Required: Accuracy Requirements? _____ Need for Extremely Fast Response? _____</p>
<p>Other Requirements: _____ _____ _____</p>
