

INSTALLATION AND MAINTENANCE INSTRUCTIONS

direct operated, high flow, balanced poppet, increased safety/encapsulated solenoid operator (EM-MXX) 1/4

GB

DESCRIPTION

Series 327 are direct operated 3/2 solenoid valves of the balanced construction type. The body material is brass or stainless steel. Solenoid details are on I & M sheet IM1047-2.

INSTALLATION

ASCO Numerics components are intended to be used only within the technical characteristics as specified on the nameplate. Changes to the equipment are only allowed after consulting the manufacturer or its representative. Before installation depressurise the piping system and clean internally.

The equipment may be mounted in any position. The flow direction and pipe connection of valves are indicated on the body.

The pipe connections have to be in accordance with the size indicated on the nameplate and fitted accordingly.

CAUTION:

- Reducing the connections may cause improper operation or malfunctioning.
- For the protection of the equipment install a strainer or filter suitable for service involved in the inlet side as close to the product as possible.
- If tape, paste, spray or a similar lubricant is used when tightening, avoid particles entering the system.
- Use proper tools and locate wrenches as close as possible to the connection point.
- To avoid damage to the equipment, DO NOT OVERTIGHTEN pipe connections.
- Do not use valve or solenoid as a lever.
- The pipe connections should not apply any force, torque or strain to the product.

ELECTRICAL CONNECTION

In case of electrical connections, they are only to be made by trained personnel and have to be in accordance with the local regulations and standards.

CARE:

- Turn off electrical power supply and de-energise the electrical circuit and voltage carrying parts before starting work.
- All electrical screw terminals must be properly tightened according to the standards before putting into service.
- Dependent upon the voltage electrical components must be provided with an earth connection and satisfy local regulations and standards.

The equipment is provided with the following electrical terminals:

- Embedded screw terminals in metal enclosure with "Pg" cable gland.

PUTTING INTO SERVICE

Before pressurising the system, first carry-out an electrical test. In case of solenoid valves, energise the coil a few times and notice a muffled click signifying the solenoid operation.

SERVICE

Most of the solenoid valves are equipped with coils for continuous duty service. To prevent the possibility of personal or property damage do not touch the solenoid which can become hot under normal operation conditions. If the solenoid valve is easily accessible, the installer must provide protection preventing accidental contact.

OUND EMISSION

The emission of sound depends on the application, medium and nature of the equipment used. The exact determination of the sound level can only be carried out by the user having the valve installed in his system.

MAINTENANCE

Maintenance of ASCO Numerics products is dependent on service conditions. Periodic cleaning is recommended, the timing of which will depend on the media and service conditions. During servicing, components should be examined for excessive wear. A complete set of internal parts is available as a spare parts kit. If a problem occurs during installation/maintenance or in case of doubt please contact ASCO Numerics or authorised representatives.

BETRIEBSANLEITUNG

direkt betätigter, großer Durchfluss, entlasteter Ventilkolben und hochsicherer, gekapseltes Magnetbetätigungsselement (EM-MXX) 1/4

DE

BESCHREIBUNG

Bei der Baureihe 327 handelt es sich um direkt betätigtes 3/2-Wege-Magnetventile der Konstruktionsweise mit "entlastetem Ventilkolben". Das Gehäuse besteht aus Messing oder rostfreiem Stahl. Weitere Informationen zu diesem Magnetenventil sind auf dem I&M-Datenblatt IM1047-2 zu finden.

EINBAU

Die ASCO Numerics-Komponenten dürfen nur innerhalb der auf den Typenschildern angegebenen Daten eingesetzt werden. Veränderungen an den Produkten sind nur nach Rücksprache mit ASCO Numerics zulässig. Vor dem Einbau der Ventile muß das Rohrleitungssystem desinstalliert und innen gereinigt werden. Die Einbauteile des Produkts ist generell beliebig. Die Durchflusfrichtung und der Rohrleitungsaanschluß von Ventilen sind gekennzeichnet.

Die Rohrleitungsaanschlüsse sollten entsprechend den Größenangaben auf den Typenschildern mit handelsüblichen Verschraubungen durchgeführt werden.

ACHTUNG:

- Eine Reduzierung der Anschlüsse kann zu Leistungs- und Funktionsminderungen führen.
- Zum Schutz der Ventile sollten für die Betriebsbedingungen geeignete Schmutzfänger oder Filter so dicht wie möglich in den Ventileingang integriert werden.
- Bei Abdichtung am Gewinde ist darauf zu achten, daß kein Dichtungsring auf der Rohrleitung oder dem Ventil gelandet.
- Zum Einbau darf nur die gezeigten Werkzeuge verwendet werden, das so nahe wie möglich am Anschlußpunkt anzusetzen ist.
- Um eine Beschädigung der Produkte zu vermeiden, ist darauf zu achten, daß die Rohrabschlüsse NICHT ZU STARK ANGEZOGEN werden.
- Spül und Führungsrohr von Ventilen dürfen nicht als Gegenhalter benutzt werden.
- Die Rohrleitungsaanschlüsse sollten fluchten und dürfen keine Spannungen auf das Ventil übertragen.

ELEKTRISCHER ANSCHLUSS

Der elektrische Anschluß ist von Fachpersonal entsprechend den geltenden VDE- und CEE-Bestimmungen auszuführen.

ACHTUNG:

- Vor Beginn der Arbeiten ist sicherzustellen, daß alle elektrischen Leitungen und Netzteile spannungslos geschaltet sind.
- Alle Antriebswellen müssen nach dem Montieren der Ventile vorbehaltlos eingestellt werden.
- Je nach Spannungsbereich und den geltenden Normen anzuwählen.

Die Spannungsbereiche müssen einen Schutzleiteranschluß erhalten.

Das Ventil ist mit den folgenden elektrischen Anschlüssen versehen:

- Anschlüsse innerhalb eines Metallgehäuses mittels Schraubklemmen. Kabelleiterführung ins Gehäuse mit PG-Verschraubung.

INBETRIEBNAHME

Vor Druckaufaufschaltung des Produktes sollte eine elektrische Funktionsprüfung erfolgen: Bei Magnetventilen Spannung an der Magnetspule mehrmals ein- und ausschalten. Es muß ein gedämpftes Klicken zu hören sein.

BETRIEB

Die meisten Magnetventile sind mit Spulen für Dauerbetrieb ausgestattet. Zur Vermeidung von Personen- und Sachschäden sollte jede Berührung der Magnetspule vermieden werden, da diese unter normalen Betriebsbedingungen sehr heiß werden kann. Bei leicht zugänglichem Magnetventil sollte vom Installateur ein Schutz vorgenommen werden, um jegliches versehentliches Berühren zu vermeiden.

VALVE DISASSEMBLY

Dismantle in an orderly fashion. Pay careful attention to exploded views provided for identification of parts.

- Remove solenoid: see IM1047-2.
- Remove top spring.
- Pull out core sub-assembly. Remove gasket.
- All parts are now accessible for cleaning or replacement.

VALVE REASSEMBLY

Reassemble in reverse order of disassembly paying careful attention to exploded views provided for identification and placement of parts.

- NOTE: Lubricate all gaskets/O-rings with high quality silicone grease.
- Snug gasket into the groove of the core sub-assembly (pay attention to the correct size).
- Place core sub-assembly into body cavity and push it gently down until the gasket just seals in the cavity of the body.
- Replace solenoid base O-ring and top spring (place closed end on top).
- Replace solenoid base sub-assembly and torque according to torque chart. This will also push the core sub-assembly into its correct position.
- Install solenoid: see IM1047-2.
- After maintenance, operate the valve a few times to be sure of proper operation.

MANUAL OPERATOR DISASSEMBLY

(Refer to exploded view)

- Unscrew manual operator housing from main valve body. Remove gasket.
- Remove retaining ring and knob.
- Drive out lock-pin with suitable drift (2,4 mm).
- All parts are now accessible for cleaning and/or replacement.

MANUAL OPERATOR REASSEMBLY

Reassemble in reverse order of disassembly paying careful attention to exploded view provided.

NOTE: For the stainless steel constructions it is highly advised to use a suitable anti-seize lubricant to avoid galling. NOTE: Lubricate all rubber parts with high quality silicone grease.

A separate Declaration of Incorporation relating to EEC-Directive 89/392/EEC Annex II B is available on request. Please provide acknowledgement number and serial numbers of products concerned. This product complies with the essential requirements of the EMC-Directive 89/336/EEC and amendments as well as the 73/23/EEC + 93/68/EEC Low Voltage Directives. A separate Declaration of Conformity is available on request.

MANUAL OPERATOR DISASSEMBLY

Reassemble in reverse order of disassembly paying careful attention to exploded view provided.

NOTE: For the stainless steel constructions it is highly advised to use a suitable anti-seize lubricant to avoid galling. NOTE: Lubricate all rubber parts with high quality silicone grease.

MANUAL OPERATOR REASSEMBLY

Reassemble in reverse order of disassembly paying careful attention to exploded view provided.

NOTE: Lubricate all gaskets/O-rings with high quality silicone grease.

MANUAL OPERATOR DISASSEMBLY

Reassemble in reverse order of disassembly paying careful attention to exploded view provided.

NOTE: Lubricate all gaskets/O-rings with high quality silicone grease.

**DESCRIZIONE**

Le elettrovalvole Serie 327 sono del tipo 3/2 a comando diretto con costruzione equilibrata. Il corpo è in bronzo o in acciaio inossidabile. I particolari della solenoide si trovano sulla scheda I & M IM1047-2.

INSTALLAZIONE

Le elettrovalvole ASCO Numatics devono essere utilizzate esclusivamente rispettando le caratteristiche tecniche specificate sulla targhetta. Variazioni sulle valvole o sui piloti sono possibili solo dopo avere consultato il costruttore ed i suoi rappresentanti. Prima della installazione: depurare i tubi e pulire internamente. Le elettrovalvole possono essere montate in tutte le posizioni. La direzione del flusso ed i collegamenti ai tubi sono indicati sul corpo delle valvole.

I raccordi devono essere conformi alla misura indicata sull'apposita targhetta.

ATTENZIONE:

- Ritirare i raccordi può causare operazioni sbagliate o malfunzionamento.
- Per proteggere il componente installare, il più vicino possibile al lato ingresso, un filtro adatto al servizio.
- Se si usano nastri, pasta spray o lubrificanti simili durante il serraggio, evitare che delle particelle entrino nel corpo della valvola.
- Usare attrezature appropriate e posizionare le chiavi il più vicino possibile al punto di raccordo.
- Per evitare danni al corpo della valvola, NON SERRARE Eccessivamente.
- Non usare la valvola o il solenoide come una leva.
- I raccordi non devono esercitare pressione, torsione o sollecitazione sull'elettrovalvola.

ALLENAMENTO ELETTRICO

L'allacciamento elettrico deve essere effettuato esclusivamente da personale specializzato e deve essere conforme alle norme locali.

- Prima di mettere in funzione, togliere l'alimentazione elettrica, disaccoppiare il circuito elettrico e le parti sotto tensione.
- I morsetti elettrici devono essere correttamente avvitati secondo le norme prima della messa in servizio.
- Le elettrovalvole devono essere provviste di morsetti di terra a seconda della tensione e delle norme di sicurezza locali.

I piloti sono muniti dei seguenti morsetti elettrici:

- Morsettiera racchiusa in custodia metallica. Entrata cavi con prescavatipo "Pg".

MESSA IN FUNZIONE

Prima di dare pressione alla valvola, eseguire un test elettrico. Eccitare la bobina diverse volte fino a notare uno scatto smorzato che indica che la solenoide è entrata in funzione.

SERVIZIO

Molte elettrovalvole sono provviste di bobine per il funzionamento continuo. Per prevenire la possibilità di danneggiare cose o persone, non toccare il solenoide. Se di facile accesso, l'elettrovalvola deve essere protetta per evitare qualsiasi contatto accidentale.

EMISSIONE SUONI

L'emissione di suoni dipende dall'applicazione e dal tipo di elettrovalvola. L'utente può stabilire esattamente il livello del suono solo dopo aver installato la valvola sul suo impianto.

MANUTENZIONE

Generalmente questi componenti non necessitano spesso di manutenzione. Comunque in alcuni casi è necessario fare attenzione a depositi o ad eccessiva usura. Questi componenti devono essere puliti periodicamente. Il tempo che intercorre tra una pulizia e l'altra varia a seconda delle condizioni di funzionamento. Il ciclo di vita dei componenti dipende dalla corretta manutenzione. In caso di usura è disponibile un set completo di parti interne per la revisione. Se si incontrano problemi durante l'installazione e la manutenzione o se si hanno dei dubbi, consultare ASCO Numatics o i suoi rappresentanti.

SIMONTAGGIO VALVOLE

Smontare procedendo nell'ordine inverso facendo riferimento agli appositi formulari per una corretta identificazione delle parti.

- Smontare la solenoide; vedi IM1047-2.
- Smontare la molla superiore.
- Sfilare il sottogruppo del nucleo. Smontare la guarnizione.
- Ora tutte le parti sono accessibili per la pulizia o la sostituzione.

RIMONTAGGIO VALVOLE

Rimontare procedendo nell'ordine inverso facendo riferimento agli appositi formulari per una corretta identificazione e collocazione delle parti.

- NOTA: Lubrificare tutte le guarnizioni/aneli di tenuta con grasso al silicone d'alta qualità.
- Inserire la guarnizione nella scanalatura del sottogruppo del nucleo facendola scattare (badare che la misura sia quella giusta).
- Inserire il sottogruppo del nucleo nell'apertura del corpo e spingere delicatamente finché la guarnizione sigilla l'apertura.
- Smontare la molla superiore e inserirla nel nucleo.
- Montare il gruppo cannotto e serrare con coppia secondo quanto indicato nella tabella. In questo modo il sottogruppo del nucleo viene spinto nella giusta posizione.
- Installare solenoide; vedi IM1047-2.
- Dopo la manutenzione, azionare ripetutamente la valvola per accertare il corretto funzionamento.

SMONTAGGIO COMANDO MANUALE

(Vedi esplosivo)

- Smontare la sede del comando manuale dal corpo valvola principale. Smontare la guarnizione.
- Smontare l'anello di fissaggio e la manopola.
- Estrarre la spina di bloccaggio spingendo con punzone adatto da (2,4 mm).
- Ora tutte le parti sono accessibili per la pulizia e/o la sostituzione.

RIMONTAGGIO COMANDO MANUALE

Rimontare procedendo nell'ordine inverso rispetto allo smontaggio facendo riferimento all'esplosivo fornito.

NOTA: Per le strutture in acciaio inossidabile si raccomanda di usare un opportuno lubrificante antigripaggio per evitare l'usura. NOTA: Lubrificare tutte le parti in gomma con grasso al silicone d'alta qualità.

L'utente può richiedere al costruttore una dichiarazione separata riguardante la Direttiva CEE 89/392/CEE Allegato B - fornendo dati di serie ed il numero dell'unità relativa. Il prodotto deve essere conforme alle esigenze essenziali della Direttiva EMC 89/336/EEC ed agli emendamenti e le direttive per Bassa Tensione 73/23/CEE + 93/68/CEE. Una Dichiarazione di Conformità separata può essere ottenuta su richiesta.

Het product kan de volgende aansluitingen hebben:

- Aansluiting in het metalen huis d.m.v. Schroefaansluiting. De kabeldoorkoer heeft een "PG" aansluiting.

De product kan de volgende aansluitingen hebben:

- Aansluiting in het metalen huis d.m.v. Schroefaansluiting.

ELETTRISCHE AANSLUITING

In geval van elektrische aansluiting dient dit door vakkundig personeel te worden uitgevoerd volgens de code van de plaatselijke overheid bepaalde richtlijnen.

LET HIERBIJ OP:

Voor dat aan het werk begint moeten alle spanningsvoerende delen spanningsloos worden gemaakt.

Alle aansluitklemmen moeten na het bebinden van het werk volgens de juiste normen worden aangedraaid.

Af naar gelang het spanningsbereik moet het product volgens de geldende normen van een aardings worden voorzien.

Het product kan de volgende aansluitingen hebben:

- Aansluiting in het metalen huis d.m.v. Schroefaansluiting. De kabeldoorkoer heeft een "PG" aansluiting.

GEBRUIK STELLEN

Voor dat de druk aangebracht wordt moet een elektrische test te worden uitgevoerd. In geval van magneetsluiters legt men meerdere malen spanning op de spoel aan waarbij een gedempt "klikken"

hoorbaar moet zijn bij functioneren.

GEBRUIK

De meeste magneetsluiters zijn uitgevoerd met spoelen voor continu gebruik. Om persoonlijk letsel en schade door aanknoping van het spoelhuis te voorkomen dient men het aanknopen te vermijden, omdat bij langdurige inschakeling de spoel of het spoelhuis heet kan worden. In voorkeur gevallen dient men de spoel af te schermen voor aanknoping.

GELUIDSEMISSIE

Die hangt sterk af van de toepassing en het gebruikte medium. De bepaling van het geluidsniveau kan pas uitgevoerd worden nadat de sluiters zijn ingebouwd.

OPMERKING:

Om de roestvrijstaal sluiters raden we om sterke vastlopers te gebruiken tegen vastlopen, om vreten van het staal te voorkomen. OPMERKING: Voor de roestvrijstaal sluiters raden we om een specifiek smerimiddel te gebruiken tegen vastlopen, LS-richtlijn 73/23/EEG + 93/68/EEG en de bijbehorende wijzigingen. Een afzonderlijke verklaring van overeenstemming is op verzoek verkrijgbaar.

BESCHRIJVING

Afsluiters uit de 327-serie zijn direct werkende 3/2-magneet-afsluiters met gebalanceerde klep. Het afsluitershuis is van messing of roestvast staal. Raadpleeg IM1047-2 voor de details over de magneetkop.

INSTELLATIE

ASCO Numatics producten mogen uitsluitend toegepast worden binnen op de naamplaat aangegeven specificaties. Wijzigingen zijn alleen toegestaan na overleg met de fabrikant of haar vertegenwoordiger. Vóór het uitvoeren dienen de leding-systeem drukkoers te worden veranderd en inwendig gereinigd.

De positie van de afsluit is naar keuze te bepalen.

De doorstroomrichting wordt bij afsluiters aangegeven op het afsluitershuis.

De pijpaansluiting moet overeenkomstig de naamplaatgegevens plaatsvinden.

LET HIERBIJ OP:

De positie van de aansluiting kan tot prestatie- en functiestoornissen leiden.

- Ter bescherming van de interne delen wordt een filter in het leidingnet aanbevolen.

- Bi het gebruik van draaddichtingspasta of tape mogen er geen deeltjes in het leidingwerk geraken.

- Men dient uitsluitend geschikt gereedschap voor de montage te gebruiken.

- Gebruik een zodanig koppel voor leidingverbindingen dat het product NIET WORDT BESCHADIGD.

- Het product, de behuizing of de spool mag niet als hefboom worden gebruikt.

- De pijpaansluitingen mogen geen krachten of momenten op het product overdragen.

ONDERHOUD

Het onderhoud aan de afsluiters is afhankelijk van de bedrijfsomstandigheden. We raden u aan om het product regelmatig te reinigen, in intervalen die afhankelijk zijn van het medium en de mate van onderhoud. Controleer tijdens het onderhoud of onderdelen zijn versleten. In geval van slijtage zijn reserveonderdelen beschikbaar om een inwendige revisie te voeren. Ingeval problemen of onduidelijkheden tijdens montage, gebruik of onderhoud optreden dan moet zich met zich ASCO Numatics of haar vertegenwoordiger te wenden.

DEMONTAGE

Neem de afsluiter op een ordelijke wijze uit elkaar. Raadpleeg daarbij de montagetekening die de afzonderlijke onderdelen benoemt.

- Verwijder de magneetkop; zie IM1047-2.

- Verwijder de bovenste veer.

- Trek de plunjier eruit. Verwijder de afdichting.

- Alle delen zijn nu toegankelijk voor reiniging of vervanging.

MONTAGE

Monteer alle delen in omgekeerde volgorde als aangegeven is bij demontage, let daarbij wel op de montagetekening voor de juiste plaatsing van de onderdelen.

- OPMERKING: Vóór de afdichtingen/O-ringen in het hoogwaardig siliconen.

- Schuif de afdichting over de plunjier in het opening in het afsluitershuis en druk de plunjier vervolgens omlaag tot de afdichting deze opening net helemaal afsluit.

- Plaats de O-ring van de kapstuk/deksels-combinatie en de bovenste veer weer terug (met het spits toelopende uiteinde naar boven).

- Monteer de kapstuk/deksels-combinatie en draai deze met het juiste positie goedom.

- Monteer de magneetkop; zie IM1047-2.

- Niet het onderhoud dient men de afsluiter een aantal malen te bedienen om de werking ervan te controleren.

DEMONTAGE VAN DE HANDBEDIENING

(Raadpleeg de montagetekening)

- Ontdek de handbediening van de handbediening los van het afsluitershuis. Verwijder de afdichting.

- Verwijder de bevestigingsring en de bedieningsknop.

- Gebruik een geschikt formaat dremel (24 mm) om de borgpen eruit te tikken.

- Alle delen zijn nu toegankelijk voor reiniging en/of vervanging.

MONTAGE VAN DE HANDBEDIENING

Monteer alle delen in omgekeerde volgorde volgorde als aangegeven is bij demontage, let daarbij wel op de montagetekening voor de juiste plaatsing van de onderdelen.

- OPMERKING: Vóór de roestvrijstaal sluiters raden we om sterke vastlopers te gebruiken tegen vastlopen, om vreten van het staal te voorkomen. OPMERKING: Vóór de roestvrijstaal sluiters raden we om een specifiek smerimiddel te gebruiken tegen vastlopen, LS-richtlijn 73/23/EEG + 93/68/EEG en de bijbehorende wijzigingen. Een afzonderlijke verklaring van overeenstemming is op verzoek verkrijgbaar.
