

I need to reduce fugitive emissions of thief hatches at my site. There must be a way to ensure my hatches are not impacting my emissions compliance.

YOU CAN DO THAT

ENARDO™ A tighter thief hatch for today's tighter emissions regulations. The EPA has limited the level of emissions allowed through its "Quad O" regulation. Tighter regulations call for tighter tank top solutions. The Enardo™ ES-665 Series hatch has been engineered for increased sealing performance, achieving 0.10 SCFH (standard cubic feet/hour) at 90% of setpoint. This performance is 10 times tighter than most hatches that achieve 1 SCFH at 90% of setpoint. For more information on how we can help you overcome your emissions challenges, contact your local Sales Office at Emerson.com.
