

Emerson Plantweb™ Insight

Connected Lighting Application

- Visualization and analytics software platform providing strategic interpretation and monitoring of plant assets
- Relevant-time actionable information and insights about abnormal situations, asset status, asset health, energy costs, emissions loss, etc.
- Seamless system integration, simple installation, and minimal configuration or set-up are not dependent on the host system or historian.
- Prepackaged analytics based on decades of process and industry experience
- Human-centered design and a user-tested interface for consistent and intuitive navigation

Features and benefits

Gain real-time insights into abnormal situations

- Suite of asset monitoring applications identifying abnormal situations and failures using data analytics and models.
- Learn about issues before they impact the bottom line with alerting and failure identification.
- The intuitive and easy-to-read views highlight high-priority, actionable information.

Lightweight, secure, and reliable software package allows seamless integration into current infrastructure

- Easily deployed via a virtual machine.
- Access the interface anytime from a multitude of web browsers.
- Human-centered design considerations allow for quick and intuitive start-up and configuration.
- Integrate with existing wireless ecosystem to expand capabilities and leverage current investment.
- Not dependent on DCS, host system, or historian.

Monitor one asset or thousands with a fully scalable software package and numerous applications

- Applications are based on key assets such as steam traps, pumps, heat exchangers, pressure relief valves, and many more.
- Start small or monitor all your assets in one spot.
- Integration with other business systems such as data historians.
- Deploy in small, large, or enterprise-wide operations.

User interface

Every application in the Plantweb Insight suite has a similar look and feel for a consistent user experience. The main views can be broken into three layers.

Dashboard

The dashboard page is an umbrella overview of the asset class being monitored. This page will provide an aggregated view of the entire asset class and the most important insights. These insights will vary from application to application, with examples including asset status, asset health, energy costs, emissions loss, critical alerts, etc. A brief trending of these key insights is also provided for historical tracking and trending.

Asset summary

The asset summary page is a tabular view of all assets being monitored. This view provides a similar perspective as the dashboard but on an asset-by-asset basis. This page is fully sortable, searchable, and filterable for quick prioritization and identification. The asset summary page can also be exported via CSV or Excel® for reporting.

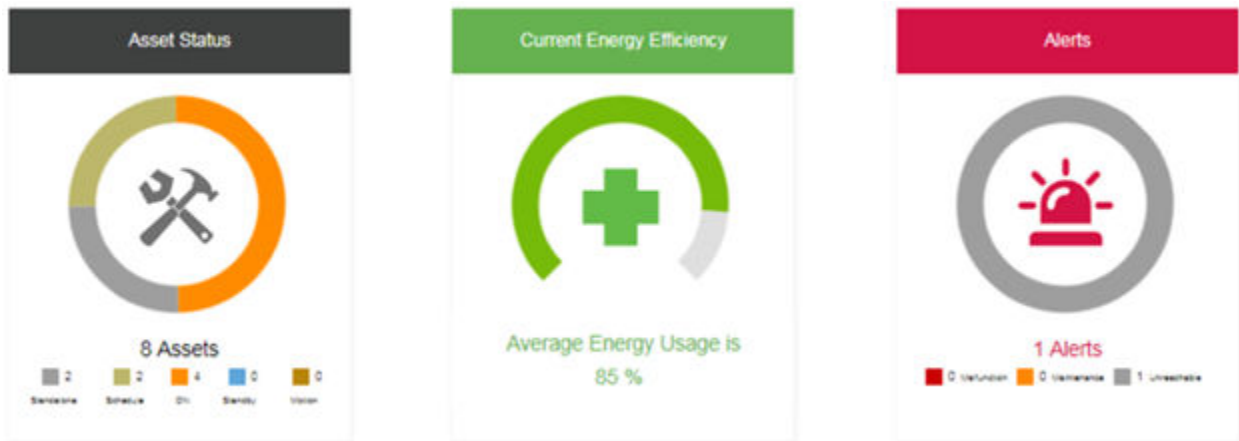

Asset #	Site	Location	Asset Status	Energy Loss (USD/01 Year)	Carbon Emissions (Metric Tons / Year)	Devices #
07100	Site 1	Unit 1	Good	---	---	10 Devices
07100	Site 1	Unit 1	Good	---	---	10 Devices
07100	Site 1	Unit 1	Blow Through	20000	60.00	1 Day
07100	Site 2	Unit 1	Blow Through	12000	40.00	20 Days
07100	Site 2	Unit 2	Good	---	---	10 Devices
07100	Site 2	Unit 1	Good	---	---	5 Devices
07100	Site 1	Unit 2	Good	---	---	10 Devices
07100	Site 1	Unit 2	Good	---	---	20 Devices
07100	Site 1	Unit 2	Plugged	---	---	2 Devices
07100	Site 2	Unit 2	Good	---	---	1 Day
07100	Site 2	Unit 2	Blow Through	10000	30.00	5 Hours
07100	Site 2	Unit 2	Plugged	---	---	20 Devices
07100	Site 1	Unit 2	Plugged	---	---	5 Devices
07100	Site 1	Unit 3	Inactive	---	---	1 Day
07100	Site 1	Unit 3	Good	---	---	5 Devices
07100	Site 2	Unit 2	Good	---	---	10 Devices
07100	Site 2	Unit 1	Good	---	---	4 Devices
07100	Site 2	Unit 2	Good	---	---	10 Devices

Asset details

The asset details page provides specific asset details. These details include location, process, application, asset, and device details for each individual asset. It also provides calculated insights such as relevant-time status, health, energy, emissions, additional information, and a brief asset history. A notes section allows users to add notes and flag assets for follow-up.

The configuration page for an asset includes several sections: 'Location Detail' with fields for Asset, Site, Location, and Location Detail; 'Steam Trap Detail' with fields for Manufacturer, Model, Type, Outdoor Size, and Installation Date; and 'Process Detail' with fields for Application and Critical status. On the right, there is an 'Asset History' graph showing a trend line, and a 'Notes' section with a text area and a 'Add Note' button.

Connected Lighting application

Features

- Easy-to-use visual dashboard display offers in-depth and continuous monitoring of connected lighting and motion sensors for enhanced insight.
- Location Explorer enables map-based commissioning to classify lighting groups and controls in different locations throughout the facility.
- Create customized lighting controls for group-based motion controls, time-based scheduling, or daylight harvesting.
- Analyze up to one year of energy and sustainability metrics and compare energy consumption across different locations.
- Calculated insights of connected lighting status, including failure modes, help optimize maintenance.
- Provides energy efficiency calculations for green initiatives.
- Luminaire diagnostics enable predictive maintenance with device health alerts.
- Gain insight into plant operations with motion and lux level awareness.

Calculated insights

- Energy usage
- Environmental impact
- Motion Triggers
- Scheduled lighting
- Facility usage
- Lighting alerts

Communication specifications

Inputs

HART-IP™ client Plantweb Insight acts as a HART-IP client for polling information from HART-IP sources such as Emerson 1410S Gateways.

Ordering information

Ordering process

1. Build and order your subscription order code.
2. You will receive instruction on where to download your application and framework software if you have not already done so.
3. Upon installation of an application onto the framework, the software will instruct you how to request a license key.
4. A license key will be generated upon request based on your subscription order code.

Note

Subscription duration starts at the time the license key is generated.

License key

Plantweb Insight applications require a valid license key to be used. License keys are delivered upon placing an order for a subscription order code and submitting a locking ID from the software. Plantweb Insight license keys are provided as a file.

Subscription order code

The subscription order code contains the details related to the software subscription used to generate a license key. This code is not your license key to activate your software. Exact subscription order codes will vary; an example of a typical subscription order code is shown in [Figure 1](#).

Figure 1: Subscription code example

1. Required subscription component (7002CL base model code)
2. Subscription type (subscription duration and maximum number of assets to be monitored)
 - An asset is a single wireless luminaire
 - Trial licenses are limited to the smallest asset capacity (requires new or existing infrastructure)

Sample subscription code

7002CL C250

Emerson Plantweb Insight Connected Lighting Application Subscription ordering information

Subscription application

Code	Description
7002CL	Plantweb Insight Connected Lighting Monitoring application

Subscription duration and assets

Code	Description
T001	90-Day trial for up to 50 assets
A050	1-Year subscription for up to 50 assets
A250	1-Year subscription for up to 250 assets
A500	1-Year subscription for up to 500 assets
A999	1-Year subscription for unlimited assets per site
B050	2-Year subscription for up to 50 assets
B250	2-Year subscription for up to 250 assets
B500	2-Year subscription for up to 500 assets
B999	2-Year subscription for unlimited assets per site
C050	3-Year subscription for up to 50 assets
C250	3-Year subscription for up to 250 assets
C500	3-Year subscription for up to 500 assets
C999	3-Year subscription for unlimited assets per site

Specifications

System requirements

Plantweb Insight is delivered as a fully developed virtual machine (e.g. .ova file) and applications are installed once the virtual machine is deployed.

On-Premise Host system

Virtualization software

- VMware Workstation Pro™ 15 or higher (requirements can be found [here](#))

OR

- VMware vSphere® 6.5 or higher (requirements can be found [here](#))

OR

- Microsoft® Hyper-V Configuration version 8.0 or higher (requirements can be found [here](#))

Hardware requirements (minimum)

- Processors = 4 dedicated cores⁽¹⁾
- Memory = 8 GB RAM
- Hard drive = 250 GB of free space

Hardware requirements (recommended)

- Processors = 8 dedicated cores
- Memory = 16 GB RAM

Cloud environment capability

- Plantweb Insight has the ability to be installed in the cloud on an Emerson Microsoft Azure instance.

Web client

Browsers (recent versions supported)

- Google Chrome™
- Microsoft Edge
- Mozilla Firefox

(1) Most PC operating systems (i.e. Windows, Linux, Mac) will use 1-2 cores.
