

Rosemount™ Slurry Magnetic Flow Meter

Featuring the Rosemount 8782 transmitter and Rosemount MS Sensor

- Industry leading performance:
 - Standard reference accuracy of 0.25% of rate
 - High reference accuracy of 0.15% of rate (optional)
 - For complete specifications, see [Product specifications](#).
- Rosemount 8782 Transmitter: Wall mount design, backlit display (optional), 15-Button tactile key pad (optional)
- Available in 4-20mA with HART®, Intrinsically Safe (I.S.) outputs, Process Diagnostics, and Smart™ Meter Verification to improve reliability and performance
- Rosemount Magflow Slurry (MS) sensor: Fully welded sensor available for maximum protection
- Rosemount 8785 Calibration Standard for on-site calibration capabilities, and independent verification of meter calibration

Product overview

The Rosemount Slurry Magnetic Flow Meter is available in a variety of sizes and configurations to ensure compatibility with many applications and installations.

Appearance	Characteristics
8782 Transmitter 	<ul style="list-style-type: none"> ■ Wall mount configuration for wall or pipe mounting ■ HART/Analog and pulse outputs available ■ Process diagnostics and Smart Meter Verification available ■ Local Operator Interface with Display (shown, optional) or LCD Display only (optional) ■ Two discrete channels (optional) ■ Designed for use with the MS sensor, compatible with the 8707 high signal sensor
MS Sensor 	<ul style="list-style-type: none"> ■ Magnetic flow meter sensor designed for high solids content, high pulp stock, or slurry flows ■ Flanged process connections ■ Fully welded, sealed coil housing (optional) ■ 3 inch (80 mm) to 36 inch (900 mm) ■ Standard, reference, bullet-nose, and flat electrodes available ■ Designed for use with 8782 Transmitter, compatible with 8712EM/8732EM when MS sensor is ordered with "D2" dual calibration
8785 Calibration Standard 	<ul style="list-style-type: none"> ■ For independent verification of transmitter calibration ■ Suitable for on-site calibration of transmitter ■ Compatible with the 8782 transmitter

Magnetic flow meter diagnostics

Rosemount diagnostics reduce cost & improve output by enabling new practices

Rosemount Magnetic Flow Meters provide device diagnostics that detect and warn of abnormal situations throughout the life of the meter - from installation to maintenance and meter verification. With Rosemount Magnetic Flow Meter diagnostics enabled, plant availability and throughput can be improved, and costs through simplified installation, maintenance and troubleshooting can be reduced.

Table 1: Magnetic flow meter diagnostics

Diagnostic name	Diagnostic category	Product capability
Basic diagnostics		
Grounding and Wiring Fault	Installation	Standard
Empty Pipe	Process	Standard
Reverse Flow	Process	Standard
Electrode saturation	Installation/process	Standard
Transmitter Fault	Meter Health	Standard
Electronics Temperature	Meter Health	Standard
Coil Circuit Fault	Meter Health	Standard
Advanced diagnostics		
High Process Noise	Process	Suite 1 (DS1)
Coated Electrode Detection	Process	Suite 1 (DS1)
Commanded Smart Meter Verification	Meter Health	Suite 2 (MV)
Continuous Smart Meter Verification	Meter Health	Suite 2 (MV)
4-20 mA Loop Verification	Installation	Suite 2 (MV)

Options for accessing diagnostics

Rosemount magnetic flow meter diagnostics can be accessed through the Local Operator Interface (LOI), ProLink® III Software, a HART Communicator (including AMS Trex Device Communicator), and AMS Device Manager. Contact an Emerson Flow representative (see back page) to activate diagnostics or for diagnostic availability on existing transmitters.

Access diagnostics through the LOI for quick installation, maintenance, and meter verification

Rosemount magnetic flow meter diagnostics are available through the LOI to simplify maintenance.

Access diagnostics through ProLink III Software

Simplify maintenance and troubleshooting practices by utilizing ProLink III Software to access diagnostics and troubleshooting information, log variable data, run Smart Meter Verification, and print verification reports.

Access information when you need it with asset tags

Newly shipped devices include a unique QR code asset tag that enables you to access serialized information directly from the device. With this capability, you can:

- Access device drawings, diagrams, technical documentation, and troubleshooting information in your MyEmerson account
- Improve mean time to repair and maintain efficiency
- Ensure confidence that you have located the correct device
- Eliminate the time-consuming process of locating and transcribing nameplates to view asset information

Magnetic flow meter sizing

Selecting the appropriate sensor size is an important step when considering a magnetic flow meter. The physical properties of the process fluid, as well as the fluid velocity should be considered. It may be necessary to select a flow sensor that is larger or smaller than the adjacent piping to ensure the fluid velocity is in the recommended flow range for the application.

Table 2: Sizing guidelines

Application	Velocity range (ft/s)	Velocity range (m/s)
Full Range	-39 to +39	-12 to +12
Preferred Service	2 to 20	0.6 to 6.1
Abrasive Slurries	3 to 10	0.9 to 3.1
Non-Abrasive Slurries	5 to 15	1.5 to 4.6

Note

Operation outside these guidelines may also give acceptable performance.

To convert flow rate to velocity, use the appropriate factor listed in [Table 3](#) and the following equation:

$$\text{Velocity} = \frac{\text{Flow Rate}}{\text{Factor}}$$

Example: English units	Example: SI units
Magmeter Size: 4 in. (factor from Table 3 = 39.679) Normal Flow Rate: 300 GPM $\text{Velocity} = \frac{300 \text{ (gpm)}}{39.679}$ <p style="text-align: center;">Velocity = 7.56 ft/s</p>	Magmeter Size: 100 mm (factor from Table 3 = 492.78) Normal Flow Rate: 800 L/min $\text{Velocity} = \frac{800 \text{ (L/min)}}{492.78}$ <p style="text-align: center;">Velocity = 1.62 m/s</p>

Table 3: Line size vs. conversion factor

Nominal line size—Inches (mm)	Gallons per minute factor	Liters per minute factor
3 (80)	23.042	286.17
4 (100)	39.679	492.78
6 (150)	90.048	1,118.3
8 (200)	155.93	1,936.5
10 (250)	245.78	3,052.4
12 (300)	352.51	4,378.0
14 (350)	421.70	5,237.3
16 (400)	550.80	6,840.6
18 (450)	697.19	8,658.6

Table 3: Line size vs. conversion factor (continued)

Nominal line size—Inches (mm)	Gallons per minute factor	Liters per minute factor
20 (500)	866.51	10,761
24 (600)	1,253.2	15,564
30 (750)	2006.0	24,913
36 (900)	2,935.0	36,451

Table 4: Line size vs. velocity/rate

Nominal line size in inches (mm)	Minimum/maximum flow rate							
	Gallons per minute				Liters per minute			
	at 0.04 ft/s (low-flow cutoff)	at 1 ft/s (min range setting)	at 3 ft/s	at 39.37 ft/s (max range setting)	at 0.012 m/s (low-flow cutoff)	at 0.3 m/s (min range setting)	at 1 m/s	at 12 m/s (max range setting)
3 (80)	0.922	23.042	69.13	907.17	3.434	85.85	286.17	3,434.0
4 (100)	1.587	39.679	119.04	1,562.2	5.913	147.84	492.78	5,913.4

30 (750)	80.24	2,006.0	6,018.0	78,976	298.96	7,474.0	24,913	298,959
36 (900)	117.40	2,935.0	8,805.1	115,553	437.42	10,935	36,451	437,416

Upstream and downstream piping

To ensure specified accuracy over widely varying process conditions, it is recommended to install the sensor with a minimum of five straight pipe diameters upstream and two pipe diameters downstream from the electrode plane.

Figure 1: Upstream and downstream straight pipe diameters

- A. Five pipe diameters (upstream)
- B. Two pipe diameters (downstream)
- C. Flow direction

Installations with reduced upstream and downstream straight runs are possible. In reduced straight run installations, the meter may not meet accuracy specifications. Reported flow rates will still be highly repeatable.

Sensor process reference grounding

In addition to grounding required by applicable safety/electrical standards or codes, a reliable process reference ground path is required between the sensor and the process fluid. Optional grounding rings, process reference electrode, and lining protectors are available with the sensor to ensure proper process reference grounding. See [Table 17](#) and [Table 18](#).

Ordering information

Rosemount 8782 transmitter

The Rosemount 8782 Transmitter with “Best in Class” performance, coupled with advanced diagnostics, provides unparalleled process management capabilities. An optional backlit 2-line by 16-character display/local operator interface is available. The transmitter can be configured using the 15 button tactile keypad.

Note

The starred (★) offerings represent standard options, and should be selected for best delivery.

- (1) *The high accuracy calibration requires the transmitter and sensor to be ordered together and paired during calibration. Spare or replacement transmitters ordered with the D1 option will receive standard calibration.*

Rosemount MS sensor

All sensors are fabricated from stainless and carbon steel and welded and sealed to protect against moisture and other contaminants. Sizes range from 3 inch (80 mm) to 36 inch (900 mm). The sealed housing ensures maximum sensor reliability by protecting all internal components and wiring from the most hostile environments.

Note

The starred (★) offerings represent standard options, and should be selected for best delivery.

- (1) Availability based on line size and flange type/rating. See [Table 9](#) (slip on flanges) and [Table 10](#) (weld neck). Consult an Emerson Flow representative (see back page) for availability with AS or JIS flanges.
- (2) Not available in Tantalum.
- (3) Not available for 3 inch (DN80) or 4 inch (DN100).
- (4) Grooved Coupling is only available with flange codes SG1 or PG1 in line sizes 3 inch to 10 inch (80mm to 250mm); not available with grounding rings or lining protectors. See [Table 22](#) for Maximum Working Pressure.
- (5) Not available with lining protectors.
- (6) Available line sizes 3 inch to 24 inch (80 mm to 600 mm); not available with lining protectors.
- (7) Available line sizes 3 inch to 16 inch (80 mm to 400 mm); not available with lining protectors.
- (8) Pressure relief valve must be installed appropriately to maintain the approvals on the meter. Recovery piping diameter must not be smaller than M6 to avoid building pressure after the valve.

Options

Note

These are not required, but they must be included in the model number if desired.

(1) *Grounding Rings and Lining Protectors provide the same process reference function.*

(2) *Consult Technical Support for Special Lay Length availability; Lining material and flange type/rating dependent.*

(3) *The high accuracy calibration requires the transmitter and sensor to be ordered together and paired during calibration. Spare or replacement sensors ordered with the D1 option will receive standard calibration.*

(4) *Dual calibration is required if the MS sensor is to be paired with 8712EM/8732EM transmitter.*

(5) *Weld-Neck only.*

(6) *Not available with US/Canadian Approval N5.*

(7) *Carbon Steel flanges for PED have a minimum process temperature limit of 0 °C.*

(8) *Available for: 3 inch to 24 inch (80 mm to 600 mm) Velocities 1, 3, 5, 7, 10 ft/s; 30 inch (700 mm) Velocities 1, 3, 5, 7, 8 ft/s; 36 inch (900 mm) Velocities 1, 2, 3, 5, 6 ft/s.*

(9) *Available for: 3 inch to 24 inch (80 mm to 600 mm) Velocities 1, 2, 3, 4, 5, 6, 7, 8, 9, 10 ft/s; 30 inch to 36 inch (700 mm to 900 mm) not available.*

Ordering flowmeter equipment

Ordering procedure

To order, select the desired sensor and/or transmitter by specifying model codes from the ordering table.

Note the cable specification requirements.

Standard configuration

Unless the Configuration Data Sheet is completed, the transmitter will be shipped as follows:

Engineering units:	ft/sec
4mA:	0
20mA:	30
Sensor size:	3-in.
Empty pipe:	On
Sensor calibration number:	1000085010000000

Custom configuration (option code C1)

If Option Code C1 is ordered, the Configuration Data Sheet (CDS) must be submitted at the time of order.

Standard tagging

Instrument tags for the transmitter and sensors are as follows:

- 316SST laser etched label, permanently attached
- Main label - Tag name: 1 line 21 characters
- Additional 316SST 'wire-on' tag available: 5 lines, 17 characters per line (6 mm height)

Interconnecting cable

Interconnecting cables are required to connect a remote mount transmitter to the sensor. When ordering cable, review the hazardous area approval requirements and the installation location requirements for proper cable selection.

- Cables can be ordered as part of the transmitter model number or as a spare parts kit.
- Individual component cables require equal lengths of coil drive cable and electrode cable and should be limited to less than 330 feet (100 m). Consult an Emerson Flow representative (see back page) for lengths between 330-1000 feet (100-300 m).

Component cable kits

Standard temp (-20 °C to 75 °C)				
Cable kit #	Description	Component	Alpha direct p/n	Alpha equivalent

Product specifications

Rosemount 8782 Slurry Magnetic Flow Meter Platform Specifications

The tables below outline some of the basic performance, physical, and functional specifications of the Rosemount 8782 Slurry Magnetic Flow Meter platform.

- [Table 12](#) provides an overview of the Rosemount 8782 Transmitter.
- [Table 13](#) provides an overview of the Rosemount MS Sensor.

Table 12: Rosemount 8782 Slurry transmitter specifications

	Model	8782
	Base accuracy ⁽¹⁾	0.25% Standard 0.15% High Accuracy Option
	Mounting	Remote
	Power supply	Global AC or DC
	User interface	LCD display with 15 button tactile keypad LCD display only No display
	Communication protocol	HART 7
	Diagnostics	Basic, MV, DS1
	Sensor compatibility	Rosemount MS and 8707 sensors only
	Detailed specifications	Transmitter specifications
	Ordering information	Rosemount 8782 transmitter

(1) For complete accuracy specifications, please refer to [Transmitter functional specifications](#).

Table 13: Rosemount MS Sensor Specifications

	Model	MS
	Style	Flanged
	Base accuracy ⁽¹⁾	0.25% Standard 0.15% High Accuracy Option
	Line sizes	3 inch to 36 inch (80 mm to 900 mm)
	Design features	Standard process design
	Transmitter compatibility	Rosemount 8782, 8732EM, and 8712EM
	Detailed specifications	MS Sensor Specifications
	Ordering information	Rosemount MS sensor

(1) For complete accuracy specifications, refer to the sensor detailed specifications.

Table 14: Lining Material Selection

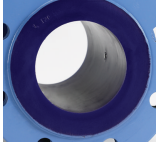

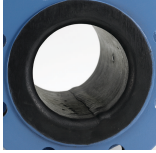

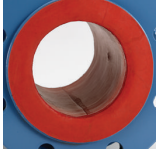

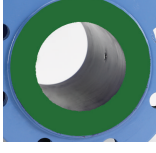

Liner material	General characteristics
PFA+ 	Best permeation resistance Best chemical resistance Better abrasion resistance than PTFE Best high temperature capabilities Excellent for pulp and paper, or liquor applications Process temperature: -58 to 350 °F (-50 to 177 °C)
PTFE 	Highly chemical resistant Excellent high temperature capabilities Process temperature: -58 to 350 °F (-50 to 177 °C)
Polyurethane 	Limited chemical resistance Excellent abrasion resistance for slurries with small and medium particles Process temperature: 0 to 140 °F (-18 to 60 °C) Typically applied in clean water
Neoprene 	Very good abrasion resistance for small and medium particles Better chemical resistance than polyurethane Typically applied in water with chemicals, and sea water Preferred liner for high pressure > ASME B16.5 Class 900 Process temperature: 0 to 176 °F (-18 to 80 °C)
Linatex rubber 	Limited chemical resistance especially in acids Very good abrasion resistance for large particles Softer material than polyurethane and neoprene Typically applied in mining slurries Process temperature: 0 to 158 °F (-18 to 70 °C)
Adiprene 	Ideal for applications with high salinity and/or hydrocarbon carryover Excellent abrasion resistance Typically used for Water Injection, Recovered Water, and Coal Gasification Slurries Preferred liner for high pressure > ASME B16.5 Class 900 Process temperature: 0 to 200 °F (-18 to 93 °C)

Table 15: Electrode material

Electrode material	General characteristics
316L Stainless steel	Good corrosion resistance
	Good abrasion resistance
	Not recommended for sulfuric or hydrochloric acids
Nickel alloy 276 (UNS N10276)	Better corrosion resistance
	High strength
	Good in slurry applications
	Effective in oxidizing fluids
Tantalum	Excellent corrosion resistance
	Not recommended for hydrofluoric acid, fluorosilic acid, or sodium hydroxide
80% platinum 20% iridium	Best chemical resistance
	Expensive material
	Not recommended for aquaregia
Titanium	Improved chemical resistance
	Improved abrasion resistance
	Good for sea water applications
	Not recommended for hydrofluoric or sulfuric acid
Tungsten carbide coated	Limited chemical resistance
	Best abrasion resistance
	High concentration slurries
	Preferred electrode for oil and gas fracturing applications

Table 16: Electrode type

Electrode type	General characteristics
Standard measurement	Lowest cost
	Good for most applications
Measurement + reference electrode (Also see and Table 17 for grounding options and installation)	Low cost grounding option especially for large line sizes
	If using a reference electrode, process fluid must have a minimum conductivity of 100 microSiemens/cm
	Not recommended for electrolytic or galvanic corrosion applications; not recommended for plastic or non-metallic piping
Bulletnose	Extended head protrudes into the flow stream for self-cleaning
	Best option for coating processes
Flat head	Low profile head
	Best option for abrasive slurries

Table 17: Process reference options

Grounding options	General characteristics
Grounding straps (no grounding options selected).	Acceptable for conductive unlined pipe
	Grounding straps provided at no cost
Reference electrode	Same material as measurement electrodes
	Sufficient grounding option when process fluid conductivity is greater than 100 microSiemens/cm
	Not recommended in electrolysis applications, galvanic corrosion applications, applications where the electrodes may coat, or non-conductive pipe
Grounding rings	Low conductivity process fluids
	Cathodic or electrolysis applications that may have stray currents in or around the process
	Variety of materials for process fluid compatibility
Lining protectors	Protect upstream edge of sensor from abrasive fluids
	Permanently installed on sensor
	Protect liner material from over torquing of flange bolts in many cases
	Provide process reference ground path and eliminate need for grounding rings or reference electrode
	Required for applications where Flexitallic gaskets are used

Table 18: Process reference installation

Type of pipe	Grounding straps	Grounding rings	Reference electrode	Lining protectors
Conductive unlined pipe	Acceptable	Not required	Not required	Not required
Conductive lined pipe	Not acceptable	Acceptable	Acceptable	Acceptable
Non-conductive pipe	Not acceptable	Acceptable	Not recommended	Acceptable

Transmitter specifications

Transmitter functional specifications

Transmitter coil drive current

For use with Rosemount MS and 8707 sensors only.

Flow rate range

Capable of processing signals from fluids with velocities between 0.04 ft/s and 39 ft/s (0.01 m/s and 12 m/s) for both forward and reverse flow in all sensor sizes. Full scale continuously adjustable between -39 ft/s and 39 ft/s (-12 m/s and 12 m/s).

Conductivity limits

Process liquid must have a conductivity of 50 microSiemens/cm or greater. Consult an Emerson Flow representative (see back page), for conductivity less than 50 microSiemens/cm.

Power supply

- 90 VAC to 250 VAC @ 50/60Hz
 - Overvoltage Category II
 - Single Phase Earthed Neutral System
- 12 VDC to 42 VDC

Note

For applications with sensors greater than 14 inch (350 mm) and process temperature greater than 212 °F (100 °C), consult an Emerson Flow representative (see back page) when applying less than 18 VDC to power terminals.

Line power fuses

Power supply type	Rating	Manufacturer part number
90–250 VAC	2.5 A, 250 VAC	Bel Fuse 3AG 2.5-R, Littlefuse 312025, or equivalent
12–42 VDC	12 A, 250 VAC	Bel Fuse 3AB 12-R, Littlefuse 314012, or equivalent

Power consumption

- 90 VAC to 250 VAC: 120 VA maximum
- 12 VDC to 42 VDC: 120 W maximum

Inrush/Start-up current

The power system must be capable of supporting inrush/start-up currents of:

- AC supply: Maximum 7 A (<5 ms)
- DC supply: Maximum 13 A (<5 ms)

AC power supply requirements

Units powered by 90 VAC to 250 VAC have the following power requirements. Peak inrush is 7 A at 250 VAC supply, lasting approximately 1 ms.

Figure 2: AC current requirements

DC power supply requirements

Units powered by 12 VDC power supply may draw up to 8.6 A of current steady state. Peak inrush is 13 A at 12 VDC supply, lasting approximately 1 ms.

Figure 3: DC current requirements

- A. Supply current (amps)
- B. Power supply (VDC)

Ambient temperature limits

- Operating:
 - -40 to 140 °F (-40 to 60 °C) without LOI/Display
 - -4 to 140 °F (-20 to 60 °C) with LOI/Display. The LOI/Display will not be visible at temperatures below -4 °F (-20 °C)
- Storage:
 - -58 to 185 °F (-50 to 85 °C) without LOI/Display
 - -22 to 176 °F (-30 to 80 °C) with LOI/Display

Humidity limits

0 to 95% RH to 140 °F (60 °C)

Altitude

- 13,123 ft (4000 m) at rated input power voltage (90–250 VAC)
- 16,404 ft (5000 m) at maximum input power voltage of 150 VAC

Enclosure rating

Type 4X, IEC 60529, IP66, IP69 (transmitter)

Note

In order to achieve the rated Ingress Protections levels, the appropriately rated cable glands, conduit connections, and/or conduit plugs shall be used.

Transient protection rating

Built in transient protection that conforms to:

- IEC 61000-4-4 for burst voltages
- IEC 61000-4-5 for surge voltages and currents

Turn-on time

- 5 minutes to rated accuracy from power up
- 10 seconds from power interruption

Low flow cut-off

Adjustable between 0.01 and 38.37 ft/s (0.003 and 11.7 m/s). Below selected value, output is driven to the zero flow rate signal level.

Overrange capability

Signal output will remain linear until 110% of upper range value or 44 ft/s (13 m/s). The signal output will remain constant above these values. Out of range message displayed on LOI/Display and the Field Communicator.

Damping

Adjustable between 0 and 256 seconds

Advanced diagnostics capabilities

Basic

- Grounding and Wiring fault
- Empty Pipe
- Reverse Flow
- Electrode Saturation
- Transmitter Fault
- Electronics Temperature
- Coil Circuit Fault

Process diagnostics (DS1)

- High process noise
- Electrode coating diagnostic

Smart Meter Verification (MV)

- Smart Meter Verification Professional (continuous or on-demand)
- 4-20mA loop verification

Output signals

Analog output adjustment ⁽¹⁾

4–20mA, switch-selectable as internally or externally powered.

(1) For transmitters with intrinsically safe outputs (option code B), power must be supplied externally.

Analog loop load limitations

- Internally powered 24VDC max, 500 ohms max loop resistance
- Externally powered 10.8 - 30VDC max.
- Loop resistance is determined by the voltage level of the external power supply at the transmitter terminals:

Figure 4: Analog loop load limitations

- A. Load (ohms)
- B. Power supply (volts)
- C. Operating region

- $R_{max} = 31.25 (V_{ps} - 10.8)$
- V_{ps} = power supply voltage (volts)
- R_{max} = maximum loop resistance (ohms)

The analog output is automatically scaled to provide 4mA at lower range value and 20mA at upper range value. Full scale continuously adjustable between -39 and 39 ft/s (-12 to 12 m/sec), 1 ft/s (0.3 m/s) minimum span.

HART Communications is a digital flow signal. The digital signal is superimposed on the 4–20mA signal and is available for the control system interface. A minimum of 250 ohms loop resistance is required for HART communications.

Analog alarm mode

High or low alarm signal is user-selectable via the Alarm switch on the front of the electronics. NAMUR-compliant alarm limits are software configurable and can be preset via CDS (C1). Individual diagnostic alarms are also software configurable. Alarms will drive the analog signal to the following mA values.

Low	3.75 mA	Requires CDS (C1)
High	22.50 mA	Factory default
NAMUR Low	3.5 mA	Requires CDS (C1)
NAMUR High	22.6 mA	Requires CDS (C1)

Scalable pulse frequency adjustment

- 0-10,000Hz, switch-selectable as internally or externally powered ⁽²⁾
- Pulse value can be set to equal desired volume in selected engineering units
- Pulse width adjustable from 0.1 to 650 ms
- Internally powered: Outputs up to 12VDC⁽³⁾
- Externally powered: Input 5 - 28VDC

Output testing

Analog output test ⁽³⁾ Transmitter may be commanded to supply a specified current between 3.5 and 23mA.

Pulse output test Transmitter may be commanded to supply a specified frequency between 1 and 10,000Hz.⁽²⁾

Security lockout

Security lockout switch on the electronics board can be set to deactivate all LOI and HART-based communicator functions to protect configuration variables from unwanted or accidental change.

Sensor compensation

Rosemount sensors are calibrated in a flow lab at the factory and are assigned a calibration number. The calibration number must be entered into the transmitter, enabling interchangeability of sensors without calculations or a compromise in standard accuracy.

Performance specifications

System specifications are given using the frequency output and with the unit at reference conditions.

Accuracy

Includes the combined effects of linearity, hysteresis, and repeatability.

(2) For transmitters with intrinsically safe outputs (option code B), frequency range is limited to 0-5000Hz and must be powered externally.

(3) For transmitters with intrinsically safe outputs (option code B), power must be supplied externally.

- Standard system accuracy:
 - $\pm 0.25\%$ of rate ± 1.0 mm/sec from 0.04 to 6 ft/s (0.01 to 2 m/s)
 - $\pm 0.25\%$ of rate ± 1.5 mm/sec above 6 ft/s (2 m/s)
- Optional high accuracy:⁽⁴⁾
 - $\pm 0.15\%$ of rate ± 1.0 mm/sec from 0.04 to 13 ft/s (0.01 to 4 m/s)
 - $\pm 0.18\%$ of rate above 13 ft/s (4 m/s)

A. Percentage of rate
B. Velocity in ft/s (m/s)

Additional transmitter performance effects

Repeatability	$\pm 0.1\%$ of rate
Stability	$\pm 0.1\%$ of rate over six months
Ambient temperature effect	$\pm 0.25\%$ of rate change over operating temperature range
Analog output effect	$\pm 0.025\%$ of span

Analog output response

20 ms max response time to step change input.

8782 transmitter physical specifications

Materials of construction

Housing	Low copper aluminum Type 4X and IEC 60529 IP66, IP69
Paint	Polyurethane coat (1.8 to 2.2 mils thick)
Cover gaskets	Silicone

Electrical connections

Conduit entries	$\frac{1}{2}$ -14 NPT or M20-1.5 ⁽¹⁾
Terminal block screws	6-32 (No. 6) suitable for up to 14 AWG wire

(4) For sensor sizes greater than 12 in. (300 mm) the high accuracy is $\pm 0.25\%$ of rate from 3 to 39 ft/sec (1 to 12 m/sec).

Safety grounding screws	External stainless assembly, M5; internal 8-32 (No. 8)
-------------------------	--

(1) M20–1.5 connections provided with an adapter.

Vibration rating

2G per IEC 61298

Dimensions

See [Figure 5](#).

Weight

Wall mount transmitter	Approximately 11 lbs. (5 kg)
------------------------	------------------------------

Add 1 pound (0.5 kg) for LOI/Display.

MS Sensor Specifications

Functional specifications

Service

Conductive liquids and slurries

Line sizes

3 inch to 36 inch (80 mm to 900 mm)

Sensor coil resistance

2 - 20 Ω

Interchangeability

System accuracy is maintained regardless of line size or optional features. Each sensor nameplate has a sixteen-digit calibration number that can be entered into a transmitter during configuration.

Upper range limit

39.37 ft/s (12 m/s)

Ambient temperature limits

- -20 to 140 °F (-29 to 60 °C) standard carbon steel housing design
- -58 to 140 °F (-50 to 60 °C) with "SH" all stainless housing design⁽⁵⁾

Pressure limits

See [Process temperature limits](#).

Vacuum limits

PTFE lining	Full vacuum to +350 °F (+177 °C) through 4-in. (100 mm) line sizes. Consult an Emerson Flow representative (see back page) for vacuum applications with line sizes of 6 inches (150 mm) or larger.
All other standard sensor lining materials	Full vacuum to maximum material temperature limits for all available line sizes.

Submergence protection IP68

The remote mount sensor is rated IP68 for submergence to a depth of 33 ft (10 m) for a period of 48 hours. IP68 rating requires that the transmitter must be remote mount. Installer must use IP68 approved cable glands, conduit connections, and/or conduit plugs.

Conductivity limits

Process liquid must have a conductivity of 50 microSiemens/cm or greater. Consult an Emerson Flow representative (see back page), for conductivity less than 50 microSiemens/cm.

(5) Not available for Class/Div approval code N5.

Process temperature limits

PTFE lining	-58 to +350 °F (-50 to +177 °C)
PFA and PFA+ lining	-58 to +350 °F (-50 to +177 °C)
Polyurethane lining	0 to +140 °F (-18 to +60 °C)
Neoprene lining	0 to +176 °F (-18 to +80 °C)
Linatex lining	0 to +158 °F (-18 to +70 °C)
Adiprene lining	0 to +200 °F (-18 to +93 °C)

Notes

- Carbon steel flanges for PED have a minimum process temperature limit of 0 °C.
- Sensors ordered with hazardous location ratings may have different maximum process temperature limits. The sensors must be installed and used as directed by the installation drawing number noted on the serial nameplate.

Table 19: Temperature vs. Pressure Limits for ASME B16.5 class flanges ⁽¹⁾

Sensor temperature vs. pressure limits for ASME B16.5 class flanges

	PN 25	23 bar	18.9 bar	17.2 bar	16.6 bar
	PN 40	36.8 bar	30.3 bar	27.5 bar	26.5 bar

(1) Liner temperature limits must also be considered.

Table 22: Sensor Temperature vs. Pressure Limits for Grooved Coupling ⁽¹⁾

Sensor temperature vs. pressure limits for grooved coupling (3 inch to 10 inch line sizes)		
Flange Material	@ 0 to 100 °F (-18 to 38 °C)	@ 200 °F (93 °C)
304/304L Stainless Steel 316/316L Stainless Steel	275 psi (19.0 bar)	235 psi (16.2 bar)

(1) Customer must supply clamp and gasket that meets line pressure requirement.

Physical specifications

Rosemount magnetic flow meters are designed to the standards defined in ASME B31.3. This standard is used as the basis for all of our other pressure vessel certifications such as CRN and PED.

Non-wetted materials

Sensor Pipe	Type 304/304L SST or Type 316/316L SST
Flanges	A105 Carbon steel, Type 304/304L SST, or Type 316/316L SST ⁽¹⁾
Coil housing	Rolled carbon steel or 300 series stainless steel
Paint	Polyurethane coat (2.6 mils or greater)

(1) Ambient temperature low limit for A105 carbon steel is -20 °F (-29 °C) per ANSI B16.5. For colder ambient environments, stainless steel flanges must be used.

Process-wetted materials

Lining	PTFE, Polyurethane, Neoprene, Linatex, Adiprene, PFA+
Electrodes	316L SST, Nickel Alloy 276 (UNS N10276), Tantalum, 80% Platinum-20% Iridium, Titanium

Flat-faced flanges

Sensors ordered with flat-faced flanges and Neoprene or Linatex liners are manufactured with the liner extending to the outer dimension of the flange. All other liner selections extend to the diameter of raised face dimension and create a raised surface on the flange face.

Process connections

ASME B16.5	<ul style="list-style-type: none"> ■ Class 150, Class 300, Class 600: 3 inch to 24 inch (80 mm to 600 mm) ■ Class 900: 3 inch to 20 inch (80 mm to 500 mm)⁽¹⁾ ■ Class 1500: 3 inch to 12 inch (80 mm to 300 mm)⁽¹⁾ ■ Class 2500: 3 inch to 8 inch (80 mm to 200 mm)
ASME B16.47 Series A	<ul style="list-style-type: none"> ■ Class 150 and Class 300: 30 inch to 36 inch (750 mm to 900 mm)
EN 1092-1	<ul style="list-style-type: none"> ■ PN10: 200 mm to 600 mm (8 inch to 24 inch), and 900 mm (36 inch) ■ PN16: 80 mm to 600 mm (3 inch to 24 inch), and 900 mm (36 inch) ■ PN25: 150 mm to 600 mm (6 inch to 24 inch) ■ PN40: 80 mm to 600 mm (3 inch to 24 inch)
AS2129	<ul style="list-style-type: none"> ■ Table D and Table E: 80 mm to 900 mm (3 inch to 36 inch)
AS4087	<ul style="list-style-type: none"> ■ PN16, PN21, PN35: 80 mm to 900 mm (3 inch to 36 inch)
JIS B2220	<ul style="list-style-type: none"> ■ 10K and 20K: 80 mm to 600 mm (3 inch to 24 inch) ■ 40K: 80 mm to 400 mm (3 inch to 16 inch)

(1) For Class 900 and higher flange ratings, liner selection is limited to resilient liners.

Electrical connections

Conduit entries	Available with ½ inch NPT and M20
Terminal block screws	6-32 (No. 6) suitable for up to 14 AWG wire
Safety grounding screws	External stainless assembly, M5; internal 8-32 (No. 8)

Process reference electrode (optional)

A process reference electrode can be installed similarly to the measurement electrodes through the sensor lining. It will be made of the same material as the measurement electrodes.

Grounding rings (optional)

Grounding rings can be installed between the flange and the sensor face on both ends of the sensor. Single ground rings can be installed on either end of the sensor. They have an I.D. slightly larger than the sensor I.D. and an external tab to attach ground straps. Grounding rings are available in 316L SST, Nickel Alloy 276 (UNS N10276), titanium, and tantalum. See [Ground rings](#).

Lining protectors (optional)

Lining protectors can be installed between the flange and the sensor face on both ends of the sensor. The leading edge of lining material is protected by the lining protector; lining protectors cannot be removed once they are installed. Lining protectors are available in 316L SST, Nickel Alloy 276 (UNS N10276), and titanium. See [Lining protectors](#).

Dimensions

See [MS sensor dimensions](#).

Weight

Product weights are included in the dimensional tables, see [MS sensor dimensions](#).

8785 Reference Calibration Standard

Functional specifications

Ambient temperature limits

- Operating: +40 °F to 104 °F (+5 °C to 40 °C)
- Storage: -40 °F to 140 °F (-40 °C to 60 °C)

Humidity Limits

0 to 95% relative humidity up to 13,000 ft (4000 m)

Performance specifications

Accuracy

- $\pm 0.05\%$ of rate at 30 ft/s
- $\pm 0.10\%$ of rate at 10 ft/s and 3 ft/s

Warm-up Time

5 minutes minimum; 30 minutes for best accuracy

Ambient Temperature Effect

< 0.015% of rate per 10 °F (< 0.027% per 10 °C)

Humidity Effect

- No effect from 0 to 60% relative humidity
- < 0.10% of rate from 60 to 95% relative humidity

Physical specifications

Electrical connections

Electrical connections are compatible with Model 8782 terminal blocks. Electrical connections are not compatible with other terminal blocks.

Orientation

Must be steady with all four feet firmly resting on a flat surface. Warm up time begins after the Calibration Standard is settled.

Materials of construction

Enclosure	Extruded aluminum and 316 stainless steel
Paint	Epoxy polyester

Weight

Approximately 10 lb (4.5 kg).

Product certifications

For detailed approval certification information and installation drawings, please see the appropriate document listed below:

- Document number 00825-MA00-0009: *Rosemount 8782 and MS Approval Document - Class Division*
- Document number 00825-MA00-0010: *Rosemount 8782 and MS Approval Document - IECEx and ATEX*
- Document number 00825-MA00-0011: *Rosemount 8782 and MS Approval Document - North America Zone*
- Document number 00825-MA00-0012: *Rosemount 8785 Approval Document*
- Document number 00825-MA00-0013: *Rosemount 8782 and MS Approval Document - EAC EX*

Dimensional drawings

Wall mount transmitter dimensions

Figure 5: Wall mount transmitter dimensions

- A. Conduit entry, 1/2-14 NPT (4 places)
- B. Ground lug
- C. LOI keypad cover
- D. Lower cover opens for electrical connections

Note

Dimensions are in inches [Millimeters].

MS sensor dimensions

Housing style differentiation

Sensors ordered with Coil Housing Configuration M0 and Safety Approvals code NH (non-hazardous) use housing Style A; all other Coil Housing Configuration options and/or Safety Approvals codes use housing Style B. The two styles are differentiated in Figure 6. The height of the sensor from the center of the pipe to the bottom of the junction box (Dim Ⓣ) varies based on the style, as indicated in the dimensional tables.

Figure 6: Housing Style A and Style B

- A. Style A. Used with Coil Housing Configuration M0 and Safety Approvals code NH.
- B. Style B. Used with all other options.

Figure 7: Coil Housing Configuration M1 detail

- A. Optional relief valve assembly is 1.75 inch (44.5 mm)

MS sensors with slip-on flanges

Figure 8: MS sensors with 3 inch to 36 inch slip-on flanges dimensional drawing

- A. Nameplate
- B. Flange bolts to straddle center line
- C. Dim A with flat face flange is equal to that of a raised face flange. If using lining protectors, see [Lining protectors](#). If using ground rings, see [Ground rings](#).

Style A shown. See [Housing style differentiation](#).

See [Table 23](#) and [Table 24](#) for A, B, C, D, J, and K.

MS sensors with weld-neck flanges

Figure 9: MS sensors with 3 inch to 36 inch weld-neck flanges dimensional drawing

- A. Nameplate
- B. Flange bolts to straddle center line
- C. Dim A for flow meters with slip-on flat face flanges is equal to that of a raised face flange. If using lining protectors, see [Lining protectors](#). If using grounding protectors, see [Ground rings](#).

Style A shown. See [Housing style differentiation](#).

See [Table 25](#) for A, B, C, D, J, and K.
